The best way to avoid Photoshop bloatware is to use an online image editor. There are many free options available online, and you'll find tutorials for each option on the Internet. For example, (right-click on image to save to your desktop) offers a simple online photo editor. Choosing a product: The basics of photo editing Sometimes the decision to buy a product comes down to an easy, essential feature such as resizing or modifying a color to pull out highlights and shadows. Other times it takes a bit more thought — such as selecting a good online editor before you spend any money. In this section, I explain the basics of the most popular photo editing tools, including Adobe Photoshop, and outline a few extras that are available in online editors. Retouching An image can be modified to improve its appearance, whether you're simply trying to remove blemishes, restore tonality, remove glare, or correct problems such as red eyes. In this section, I explain the types of retouching you can do with Photoshop and outline some online photo editors that offer the same capabilities. Creating and applying levels Levels is a measurement that you can use to adjust the brightness and contrast of an image. You can easily create and apply levels via Photoshop, because the Levels adjustment layer is available in most Photoshop versions. Photoshop helps you to set the levels via a slider or in a window with the histogram. You can also adjust the brightness and contrast of an image in an online editor. Web-based tools offer this feature on the fly. There are also online tutorials that explain how to do this with the best-selling online photo editor, PicMonkey, and other online image-editing tools, such as Snapseed and GIMPshop. Exposure, tone, and color You can also adjust the exposure, brightness, and color of a photo, so you can adjust colors in the shadows or brighten areas in the sun. These can be adjusted in two ways: Lightness (brightness): The white portion of the colors is white; the black portion is black. Darker tones will be displayed as black or near-black. Lighter colors are displayed as white. The HSL (hue, saturation, lightness) color modes are commonly used with this type of editing. Saturation (color): The amount of

Trabectedin in soft tissue sarcomas: results from an Italian observational study. The efficacy and safety of trabectedin in soft tissue sarcomas (STS) have not been fully investigated. The primary endpoints of the present analysis were overall survival (OS) and progression-free survival (PFS) in STS patients with response evaluation. Secondary endpoints included quality of life (QoL) and toxicities. Safety was evaluated through treatment-related and other adverse events. Between January 2005 and April 2012, 81 patients with advanced STS were enrolled. Median OS was 11.1 months (95% confidence interval [CI], 8.8-14.1 months), median PFS was 7.1 months (95% CI, 5.4-8.9 months), and disease control rate was 48.1%. Median time to progression was 7.5 months (95% CI, 5.9-9.3 months), and stable disease at 12 weeks was observed in 37.7% of patients. During the treatment, grade 3/4 non-haematological toxicities were recorded in 27.8% of patients. No difference was observed regarding drug-related or other adverse events between pre-treatment regimens, including ifosfamide plus doxorubicin plus etoposide, ifosfamide plus doxorubicin, and ifosfamide plus other chemotherapy regimens, except for higher incidence of mucositis in arm A than in arm B. The observed results, together with the favourable cost-benefit ratio, supported the use of trabectedin in STS.Q: Confusion in convex optimization For convex optimization we have $$ \phi(x) + \langle g(x),u-x\rangle \geq \phi(u) $$ and $$ \phi(x) + \langle g(x),z-x\rangle \geq \phi(z) $$ where g is a convex function and ϕ is a convex function. But when we solve the optimal z, the solution for the above inequality are x and z (see simple two-dimensional examples: If that's the case, then how can we have x and
