The import document is automatically named “Import \_”, where “\_” is the name of your target software that you want to import into. The import document is in.PNG format and is the target of your drawing, so it is named after your drawing. The import document is a PNG document with a resolution of 1200×1100 dpi at 8-bit or 16-bit grayscale (RGB or CMYK colors). It is saved with its own file format that is called “PNG”. You cannot make a copy of the import document, but you can rename it with a new file name and keep the original file. If the importing software supports “Smart Drawing Objects”, you can select this option when creating your import document. When this option is selected, the importing software creates a copy of the original drawing object and imports it into the target drawing file as a smart object. This makes it possible to work with the imported objects and the drawing file as one, single file. More information about Smart Drawing Objects is available in the
