Girder For Windows

Girder enables users to automate their Windows based media experience using enterprise Windows plugin and event generation technology that is perfect for automation of Windows based multimedia hardware, software, or devices like media players, DVD players, and other custom applications. Girder is also the secret weapon behind thousands of automated Windows based applications that provide web based or enterprise computing solutions for commercial customers. Girder technology is completely applicable in a wide variety of situations from home automation to enterprise automation. Girder works by generating events or messages at runtime that are perfectly suited for automation of anything from gaming to home automation. Girder can also be utilized as a powerful tool for enterprise computing to automate many jobs that Windows users assume they can run by themselves. While Girder can be used to turn any Windows application into a fully automated application, it is best suited for automation of devices that take input and produce output via Windows messaging services and is particularly well suited to automation of Windows based multimedia devices. Girder can be used as a Windows based agent to distribute and control Windows based applications. Girder can also be used to remotely control and manage Windows based devices like Xbox or Playstation like USB joysticks, receivers and projectors. While Girder can run on Windows 8, Windows Server 2012, Windows Server 2008, Windows Vista, and Windows Server 2003 and all Windows versions from 2000 up to Windows 7 and Windows Server 2008 R2, you need to be either a licensed pirated copy of Windows Server 2012, Windows Server 2008, Windows Vista, or Windows 7, or a license of Windows Server 2008 R2 or Windows 7 Home Premium. Girder Hardware Requirements: Girder is designed to be utilized as a driver that is to be loaded into Windows like all other drivers. However, unlike other drivers, Girder cannot be utilized as a user interface device. Girder must be loaded as a driver and it is not possible to run Girder as a user interface. Girder was built for and works best with Windows 7 with service pack 1 and higher installed. Girder is designed to operate with the installed version of Windows 7 with service pack 1 and higher. If you are running Windows 7 with service pack 1 or Windows Server 2008 R2, Windows Server 2008, Windows Server 2003, Windows Vista, or Windows Server 2003 with service pack 2 installed, you will need to take your installation media and upgrade the operating system to Windows 7. Girder is not designed to operate on any other version of Windows. Girder
