I'm new to F# and I have a question regarding using the Func type

---

in F#. If I write a piece of code like this: `let z = (fun x y z -> true)` and it's compiled to something like this: `let z = true @>` Is it possible to create a func with more than one parameter? Something like: `let z = (fun x y -> x > 0)` Will this compile? Thanks in advance.

A: Is it possible to create a func with more than one parameter? Yes. For example, `let z = (fun x -> x > 0)` Note that in your example, the parentheses around the second parameter are unnecessary. You can write `let z = (fun x y -> true)` without any trouble. A: Yes, that's

possible, and it's called a partial function. `> let z = (fun x -> x + 1) val z : int -> int > z 1 2 > let z = (fun x -> x + 1) 1 val z : int -> int > z 2`

One thing to watch out for with partial functions is that the last argument goes first, so

---

you'll need to play with the parentheses if you have an expression with side effects, in the same way you would with curried functions. Force India has been given a contract extension by HRT and will continue in Formula One next year as announced today. 3e33713323
