

Mmu Calculator Crack + Activation Free Download

- graphic user interface to enter photon and electron field details - supports PDD graph creation for photons, electrons or mixed photon and electron fields - real time display of MU value and MU curve and basic function test - dose linearity test by changing the energy, the number of energies and the number of fields - dose rate test by changing the current and the number of fields - the width of the window can be set to display only the MU value and the MU curve - graphs are saved in CSV files - the program is an MDI application - it is an open source project. - the designer is looking for a C# programmer to support development and maintain this project on GitHub - you can use the program with any Windows operating system. - the design is optimized to 1024x768 resolution with Windows 10 Mmu Calculator Torrent Download is a compact tool that enables you to analyze the patient details and automatically calculate the MU value. You just need to enter the photon and electron field details in the main window in order to view the MU value in real time. The program is also able to create PDD graphs for photons, electrons or mixed photon and electron fields. Note: In order to activate the program you need to enter the credentials specified in the screenshot from the developer's website. The simple and easy-to-use MMU calculation program MMU Calculator. MMU Calculator will calculate the MU values for both photon and electron fields and all the interface is integrated in one window. It's very convenient. The program will show you the result in real time and it is very easy to understand and use. When you use the expert mode, it will calculate the MU value automatically without the interference of you. ·The program is compact, multi-platform compatible and does not require any installation. ·The program is designed to analyze one or multiple files and gives a report for MU value with a few mouse clicks. ·This program is developed for quality assurance (QA) to make sure that the dose distribution calculations are correct. ·The dose and fluence distributions can be analyzed in 2D or 3D in any coordinate system. ·The program provides the option to use any dose calculation model. ·The program can also be used to calculate the reference fluence for the next field for all the beam energies. ·We do not place any water equivalent thicknesses or electron densities to the calculated dose distribution. ·The fluence distributions for photons, electrons and mixed photon and electron fields are saved in output files in DICOM (Digital Imaging and Communication in Medicine) format. ·The PDD graphs for photons, electrons or mixed photon and electron fields can be saved in either JPG or PSD format. ·The program is developed in Windows 7, 8, 8.1 and 10 compatible platform. ·The program supports 10 languages, including English, French, German, Italian, Spanish, Russian, Polish, Spanish, Portuguese and Brazilian. Scapula Projection Free2D Alpha is a free project that allows you to create an animated 2D projection image of the anatomical scapula on any of the 3D mesh models. The idea was born during work on imported models in free3d preview. In order to visualize the anatomy of imported models better, the tools needed to be extended and made more user friendly. The main element of this add-on is to enable creating an animation of the scapula anatomy using several models. If you select the object with the best representation of the anatomy, then the animation will start and will be tracking by the cursor. The user will be able to regulate the direction of movement with the right-mouse button and the speed with the left-mouse button. Every time you stop the animation with the left-mouse button, the image will disappear. The main feature is to prevent the visibility of the skins. All the models are merged to one skin. This allows you to use only one occluded model with unlimited viewport for the animation. So, this add-on is designed for all the users who want to show the anatomical scapula on their work, for example: ·
