Yoout is a simple command line application that you can use to extract small images and charts from Excel spreadsheets. The usage is simple: you just have to specify the folder that contains the Excel files and choose a location for the output. The images are saved in JPG format. www.yoout.it Here are the questions I'd like answered before I start gathering my notes. Should I upgrade to the company provided laptop (whatever it is) or should I go with an HP laptop? Should I use a Windows 7 or 8.1 laptop? What should I look for in terms of performance as I work in CAD/AutoCAD? In terms of graphics or video card, what should I have? As far as CAD, what do you use? What CAD software, and where do you download it from? What do you use to create CAD drawings? I'm at a complete loss on where to start, so I'm hoping that someone will walk me through this process. I'm a high school student working on a vehicle I've designed. I've decided to go ahead and build it. I'm looking at getting the car for about $17,000 and I'm unsure where to start with the cost of an engine. I've looked online and I was able to find a few engines with the number of cubes I need. But I'm unsure as to what engine is the best for me and what will be best for future developments. Here's what I've got: I think that it might be easier to start with a simple engine and then design more as I go. If it seems that I'm going the right direction then I can always contact someone at your company to help me further down the road. You're probably going to laugh, but what would be the best place to start looking for an engine? Thanks for reading and for any help you can provide! A: It's interesting to see this question on a design site, since this is primarily an engine design question. In my experience as a designer, good mechanical drawings are the least interesting aspect to begin with. First draw a drawing of the vehicle with labeling and a scale, so you have a general view of what is happening. Then focus on the important components. For instance, engine, doors, and access. If you're concerned about complexity, a good way to start might be to scan drawings from books and other websites, print them 09e8f5149f
