applications. Try to keep it clean, it's the first step to having a Windows system that runs smoothly and keeps you safe. Setup, prerequisites, and interface This application doesn't do much, besides scanning your registry for infected or outdated items, and then alert you of their existence. The GUI is fairly simple, with a left column with options (clean, customize and help), and a right column containing a list of current items. The "customize" option is completely absent, which makes finding specific things a little difficult. In this category,

you can only select one of the options (removing elements from the end of the list), and then click the button.

Evaluation and conclusion The tool identified a lot of unnecessary programs, and nicely formatted the output.

While this tool doesn't have a lot of features, the

straightforward interface

allows a quick scan of the

system. Computer Utilities & Maintenance by
