Read more(1) Field of the Invention The present invention relates generally to a method of forming a metal silicon nitride coating on a substrate. More particularly, the present invention relates to a method of forming a metal silicon nitride coating on an aluminum substrate. (2) Description of the Prior Art In the electronics industry, devices are often formed on substrates such as silicon, sapphire, quartz, glass, or ceramics. These substrates are often used in electronic devices or electronic components. For example, it is often desirable to form a diffusion barrier layer, such as a silicon nitride layer, on a substrate. A diffusion barrier layer can inhibit the diffusion of silicon from a silicon substrate into a metal layer or vice versa. The diffusion of silicon from a silicon substrate into a metal layer can often cause the formation of a semiconductor-metal electrically active region. This is often undesirable because semiconductor-metal electrically active regions can degrade the electrical performance of the device. Current techniques of forming a diffusion barrier layer include sputtering a metal nitride, such as titanium nitride, onto the substrate. Sputtering is a low pressure technique, wherein titanium nitride is deposited onto the surface of a substrate by bombarding a target with ions of titanium. Unfortunately, sputtered titanium nitride will often not be a good diffusion barrier. The titanium nitride is often too porous to effectively inhibit the diffusion of silicon from the substrate. Often, it is desirable to form titanium nitride or silicon nitride layers with a high degree of purity. It can be difficult, however, to cleanly remove byproducts such as metal and water from titanium nitride or silicon nitride layers formed by sputtering. Titanium nitride has been used in the electronics industry as a diffusion barrier layer or as a diffusion barrier lining layer. The titanium nitride layers are often formed on a substrate by plasma enhanced chemical vapor deposition. Unfortunately, it has been difficult to form a uniform titanium nitride layer over the entire substrate surface. Often, titanium nitride tends to

The Register has discovered that the microphone is exposed in the Alexa app, so an attacker needs to get ahold of your device to make changes to the audio settings. Alternatively, they could be listening to. Oct 29, 2020. Modding your Wii U console in the UK is much easier than you think.
