Mb Highly Compressed.Q: save only updated object in core data I read the documentation and tried to understand what's going on but still didn't find a good explanation. Suppose I have an entity "Car" and I fetch some instances from the database with the store coordinator. Now I want to update a specific attribute of all those instances. I call the class method of the store coordinator -

`(void)addOrUpdateCars:(NSMutableArray *)cars block:(void (^)(NSError *error))block` and pass to it the array of instances. Now I want to save only the modified instances. How can I know which of the passed instances were updated? Do I need to create a new `NSManagedObjectContext`? or just to save the store coordinator? A: What I have is an `NSManagedObjectContext` which gets persistency between 5 calls. -

`(void)addOrUpdateCars:(NSMutableArray *)cars block:(void (^)(NSError *error))block` So I can pass the `NSManagedObjectContext` to the block as a closure. That way I know what changed. What came first? Why? And how? These questions are central to human biological evolution and are being addressed

by the international community through modern genetic research. The present proposal is designed to elucidate the evolution of eyes on land vertebrates, including a large
