SAWStudio

The KEYMACRO technology is a combination of the KMACRO (manufactured by Erne Multimedia) used for production control and automation purposes, and the 'EZM' sound engine (manufactured by Sonic Reality), the most sophisticated digital sound engine ever developed. The result of this application is that the KMACRO is virtualized and becomes a digital product. As well as the EZM engine, the user can have access to the main features of the legendary boards, as well as the mixing section. With a KMACRO you can have access to the 5 main programmable keys: Master Volume Balance Loudness Exposure Stereo width Key On/Off Quick Mute Quick UnMute Instant mute Instant unmute Headphones Source selection Instrument selection Output selection Input selection Buffering Looping Hot loop PAN X-Lander Tape section Cue Loop D-Cue Instrument names Double Transpose Program changes Sending to KMACRO or control surface Program change Tones Sending to KMACRO or control surface Instrument Library EZM Engine Description: Sonic Reality provides, through its EZM platform, a comprehensive set of programs that allows the use of sound effects on any Digital Audio workstation. EZM offers a program that allows the user to quickly create, edit, process, and output these sounds in real time on any Digital Audio workstation, using its dynamic signal processing engine, all in a true analog environment. Every imaginable sound effects library can be reached through the graphic library manager, so the user has an ideal selection of sounds at their fingertips. Each of the sound effects can be assigned to any of the 8 sound engines, which are the 4 classic ones, as well as 4 modern sound effects engines. All these sound engines are made up of 4 channels each, of which the user can choose between mono and stereo, low frequency and high

frequency, which are all fully editable in real time. Each of these channels can also be used with any of the 10 effects, in order to achieve various tonal corrections. In addition, all of these can also be assigned to multiple instruments simultaneously, through the instrument engine. Sound effects can be easily generated, either manually or through its 8 generator engines. All of these engines have unique features, that enable the user to play an 77a5ca646e

SAWStudio

The SAWStudio app is a fully loaded, professional-grade mixer that comes with all the most essential features and options to allow one to perform the process of sound engineering at a level, which is comparable with that of a professional sound engineer. In addition, it offers a unique 24-bit processing engine, which allows one to process and manipulate sounds with a level of quality, which is similar to that of the analog consoles. Aside from the processing engine, the app also comes equipped with a multitude of processing tools that allow one to perform the actual sound engineering and processing, as well as many other things. In addition, the app comes with a highly intuitive user interface that allows one to perform the sound mixing without any difficulties. The app is very easy to use, and if one needs help, then there are plenty of user guides available. Key features: • 120 mono or stereo playback tracks • 8 lanes per track • 6 distinct library views • 12 function keys • Hardware mixer, which uses a line array input microphone • Direct access to 20 effects modules • Multitrack recording, with the ability to record up to 20 mono or stereo tracks simultaneously • A 24-bit processing engine, which allows one to perform the actual sound processing • Sound and video editing • Audio source analyzer • Multitrack recording with insert effects • MIDI recording, which allows one to record MIDI data into the track • Noise gate • Overdubbing • Manual audio tracks • 2 mic inputs and 2 line inputs • Built-in effects • Built-in acoustic panel • Built-in scene lighting • Built-in live FX • Built-in speaker simulator • Built-in delay effect • Built-in reverb effect • Built-in equalizer • Built-in EQ crossfade • Built-in compressor • Built-in gate • Built-in echo/delay • Built-in multi-band compressor • Built-in multi-band limiter • Built-in peak hold • Built-in phaser • Built-in stereo chorus/flanger • Built-in stereo delay • Built-in stereo compressor • Built-in stereo reverb • Built-in stereo SFA • Built-in stereo EQ • Built-in stereo limiter • Built-in stereo gate • Built-in stereo multiband compressor • Built-in stereo

What's New In SAWStudio?

SAWStudio is a fully functional audio studio emulation, which was developed specifically in order to offer users a console emulator for sound processing and mixing. This unique application was developed in order to provide an improved, yet easy-to-use interface for professional level sound processing. It was designed to mimic the look and feel of the analog consoles, which were commonly used in sound processing studios. The application was developed in order to be simple to use, and bring the best possible sound processing and mixing experience. The integrated sound editor and instrument browser allow one to create and playback both virtual instrument sounds, and also to record audio files. The user interface consists of two separate windows; the 1st one being the main mixer window, which mimics the actual analog console of an audio processing studio. The second window is the instrument browser, which allows for easy navigation of the entire library of instrument presets. The most important controls, as well as the entire function of the application, are all located on the front panel of the main mixer window. Features: 120 mono or stereo playback tracks 8, 4, or 2 layers per track 8 aux channels 2 mic channels 2 stereo master channels 6 library views 6 user-customizable color schemes Programmable function keys Audio processing and sound mixing experience with instant access to all settings and parameters Recording software included Comprehensive search functionality Customizable track names, folder, and instrument grouping Integrated browser with the ability to import presets from audio recording software Easy to learn and user-friendly The software will be released in three distinct parts, each providing a different set of features. The full set of features and the release of the entire suite of software is expected by early 2019. Official website and documentation In a review of the software, ExpertReviews concluded that there were no outstanding features when compared to a similar tool. However, the review did note that the trial version of the software did have some built-in limitations, that were not found in the full version. As for performance, reviewers found the software to be very responsive, with the built-in audio engine performing quite well. In addition, the interface of the software was found to be easy to learn, while its look and feel was found to be aesthetically pleasing. The Pros of the software were found to be the extensive library of sounds, with the Pros commenting that the library is of good quality and variety. The Cons of the software were found to be the lack of sound processing tools, when compared to other similar tools. In addition, the Pros also found the trial version of the software to be more functional than the full version.
