AutoCAD

During the 1980s, many commercial CAD programs were proprietary and expensive, with larger companies using more expensive packages, including Tekla, Inventor, PTC Creo, Pro/ENGINEER, AutoCAD, and CATIA. AutoCAD was released around the same time as the 1982 desktop Mac and IBM PC DOS 1.0 versions, and it included a graphical user interface and a relatively intuitive 3D modeling environment for the first time, which the software industry had been trying to develop since the early 1980s. The first version of AutoCAD was for Apple II, and the first version for IBM PC was a \$1,500 option. Both versions were on floppy disks. AutoCAD software 1.0 for Apple II sold for \$525 in 1983, and the first version for IBM PC sold for \$1,500. AutoCAD was first used in mechanical engineering, but it became popular across other industries, including architectural drafting, telecommunications, manufacturing, and automotive design. AutoCAD became the most popular commercial CAD program in the world by 1987, and its popularity declined slightly until the introduction of the first AutoCAD for Windows in 1993. AutoCAD is designed to be the industry standard for computer-aided drafting. AutoCAD is also the leading provider of 2D CAD services for architectural and engineering firms, and it also serves as a development tool for AutoCAD applications and add-ons. AutoCAD was originally developed in the 1980s by Programmer/analyst Nathan Murray, now known as the "father of AutoCAD". The program is available for most platforms, including the Apple Macintosh, Microsoft Windows, and Linux. Since 2010, the product has been available as a web application, and new features are integrated into the web app using JavaScript, HTML5 and CSS3. In 2018, approximately 59.63 million AutoCAD users were active in the world, including 16.85 million users in the United States, and 48.47 million active users in the world. History AutoCAD history is the history of the brand AutoCAD from its conception to the present. AutoCAD history from 1982-2017 AutoCAD history 1982-2013 In 1981, Nathan Murray was doing a computer drafting program for himself to work on his car designs, but he realized it would take too long for him to perform the drafting work alone. Murray told his friend and AutoCAD
