Users may create, modify, and view 2D or 3D drawings in any resolution on any platform. Users may also post their own 3D drawings online. Users may organize their drawings into folders, organize drawings within folders into drawings sets, and create drawing sets themselves. AutoCAD has many specialized features and functions. It supports a variety of file formats including DWG, DWF, DWFx, DXF, AI, IGES, and STEP. Users may change the appearance of a drawing. AutoCAD includes tools to assist in geometric modeling, including primitive solid construction, a visual programming tool called AutoLISP, a

parametric design tool called MEP and a coordinate measuring tool called AutoCAD PE. The MEP tool can be used to create and modify geometric solids, and also to generate parametric families. The parametric tool can be used to create, modify, and analyze parametric shapes. AutoCAD's drawing view has many options, including magnification, scale, font, type, grid, transparency, vectorization, and overlay. These options are configured by the user, and are not stored in the drawing. Autodesk's AutoCAD 2018 software runs on all versions of Windows from XP onwards. AutoCAD 2017 is a widely used CAD software package, and is available for both 32-bit and 64-bit Windows operating systems. A free trial version of AutoCAD 2017 is also available.

Introduction to AutoCAD Architecture features This overview of AutoCAD Architecture is designed to help users get started with the software by showing how to install, use, and customize the interface. AutoCAD Architecture is configured by default for the 2D Drafting workspace, but it can be changed to the 3D Drafting, Engineering, or Architectural workspaces. Users can change the interface to the workspaces by modifying the project, designating the new workspace by clicking the workspace icon in the toolbar, and saving the changes. Use the following instructions to select a default workspace for AutoCAD Architecture. 1. Launch AutoCAD Architecture from the application menu or shortcut menu. The Default Project dialog box appears. This

dialog box contains the dialog box options, a dropdown list to select an existing project, and a tab to display settings for the current project. 2. Click the Default Project tab. The Default Project

group database queries in Angular I am using Laravel, Angular, and Bootstrap for an app. I am making a chart that gets its data from a database query. The problem is, the data needs to be in such a way that it is grouped. I am fairly new to both Angular and Javascript so maybe I am making a rookie mistake here. I was not able to find an answer to this on StackOverflow or elsewhere. Here's a simplified version of my app's JavaScript: var testApp = angular.module('testApp', ['ngRoute'])

testApp.config(function($routeProvider) { $routeProvider .when('/', { templateUrl: 'partials/index.html', controller: 'TestController' }) .otherwise({redirectTo:'/'}); }); testApp.controller('TestController',

"stuff", data2: "more stuff"});
