What I want is in first column the description of a file and in second column the file with the extension.jpg,.gif,.png, etc. A: There are a couple of things going on: Your cell formula is a =. This is a formula that returns a value. A value is like a number, and a formula can be used anywhere a number can be used, e.g. in an arithmetic expression or in the cell's value. Your data is already in a CSV file, you don't have to convert it to an Excel table. Then you can just import this as a table of values. For cell A1: in the Data tab, click the table icon, then from the "More" dropdown select Import Excel Table. Then select your text file and click OK. // Copyright 2009 the Sputnik authors. Herein, we describe the preparation of new unbalance fullerene containing two large fullerene portals. Both unbalance fullerenes have a nearly 0.85 nm larger planar [C60] than the large fullerene (1.10-1.20 nm). Further, we demonstrate that the larger portal of the unbalance fullerene can be displaced by tetrabenzofulvene to access a [C60]@unbalance fullerene (1.15 nm). UV/vis and fluorescence spectra indicate that tetrabenzofulvene does not alter the [C60]@C60-C60 bond geometry of the [C60]@unbalance fullerene, and the only red 570a42141b
