The CAD market was expected to grow at a compound annual growth rate of about 12.5 percent through 2016. In 2016, over $1 billion of CAD software revenue was generated by companies with sales of $1 billion or more, and Autodesk had a major presence in that market segment. Autodesk is also positioned in the smaller, emerging market segment (sales of $50 million to $1 billion) that includes "enterprise" design software. The company has had limited experience with enterprise software but has been a strong developer of products for desktop and mobile users. Through 2016, Autodesk had a market share of 12.3 percent in the desktop CAD market (with over 2.4 million desktop license sales), and 7.7 percent in the enterprise CAD market. The company also had substantial potential to grow in the mobile CAD market, where it had a 17.7 percent market share. However, although Autodesk products are frequently available on multiple mobile platforms, the company still lags its competitors in developing compelling products that run on a variety of mobile platforms. A CAD component software product, Autodesk Inventor, accounted for 25 percent of Autodesk's total software revenue in 2016, and a product portfolio management (PPM) product, Autodesk Project Planner, accounted for another 25 percent of its revenue. Autodesk also had a strong presence in the PLM market, including the following products, which accounted for a combined 28 percent of its total software revenue in 2016: Autodesk Forge, Autodesk Navisworks, Autodesk Fusion 360, Autodesk Navisworks Architecture, and Autodesk Revit. In addition, the company had a significant position in a new product category, digital 3D printing. Competitive strengths: The strong CAD and PLM software products in Autodesk's portfolio give the company a broad set of capabilities across the design and manufacturing process. Autodesk's software products can be used in a collaborative manner, enhancing the company's products in areas such as social media marketing, user-generated content, customer support, and market research. However, the company's mobile CAD and mobile PLM products, while commercially successful, have not been as successful as its desktop products. The company also has a significant presence in a variety of other software markets, including the creation of 3D virtual worlds, artificial intelligence, and the

Micro-browsers A third-party C++ AutoCAD JavaScript Toolkit SmartART, a Java-based widget that gives graphical user interface (GUI) capability to AutoCAD. It is a component of AutoLISP and Visual LISP. SmartART Plus (SmartART with Update Manager) and its successor SmartART 3000, which adds integration with Microsoft Office. SmartArc, which is Java-based. Simplify3D S3D has its own system of language called "S3DL" that does not use the AutoLISP or Visual LISP languages. This can be used to automate tasks such as: switching between design views, creating a view and switching the view back. 3DS Design Studio - a visual programming environment for adding programmable functionality to 3D objects. Scripting In addition to the API support, AutoCAD supports its own scripting language called AutoLISP. This language supports use in applications that need to be updated frequently, especially in simulation applications. This has been replaced by Visual LISP and now only supports use in AutoCAD-based applications. AutoLISP is currently used in the following products: Autodesk Civil 3D Autodesk Dynamo Autodesk Forge Autodesk Revit Autodesk Steel Autodesk Vault Autodesk Architectural Desktop Autodesk Construction Autodesk CrashPlan Autodesk Motion Builder Autodesk 3D Warehouse Autodesk Meshmixer Autodesk Navisworks Autodesk Navisworks Plugins Autodesk Smoke Design Autodesk Showcase Autodesk WebPLM Autodesk Vault 3D Autodesk Forge Viewer Autodesk Data Management Autodesk Raster Autodesk Composer Autodesk SceneView Autodesk Design Review Autodesk Illustrator Autodesk App Development Toolkit Autodesk Fuse Autodesk Motion Builder Autodesk Reflect Autodesk Smoke Autodesk Stereolithography Autodesk Silex Autodesk Pipeline Autodesk Revit Architecture Autodesk SilverSwan Autodesk Superset Autodesk Viewers Autodesk Wireframe Autodesk Vault Designer Autodesk Viewer Autodesk WebPLM a1d647c40b

But tonight, it's a new fight over the border wall with this man in the White House. They're calling this tomorrow's battle. Good evening, I'm David Wright. And I'm George Stephanopoulos. Here's what else you need to know tonight. Here's the president tonight, he's already ramped up the pressure on House Democrats. He says if they don't act, he won't sign any bill that doesn't include funding for his border wall. House Democrats say that's a nonstarter. Democrats are balking at the president's proposal for $5 billion for the wall, which includes technology upgrades and other border security measures, but not a physical wall. Last night, the president offered another $900 million for new technology. Democrats say that's not enough. This morning, the president sat down for an exclusive interview with ABC's Martha Raddatz and went a step further. He says if House Democrats don't approve wall funding, the government will shut down. They say they'll keep the government open but without a deal on border security, they don't see any way to fund a wall. And here's the president's plan. Tonight's "situation room," they're live at the White House. "Situation room," I'm the father of a border patrol agent, Juan Soto. Juan, did you go to the border? Yeah, I got my 15 minutes, right, David? The short answer is I did. What was that like? In the last two weeks I was there I didn't see anybody, right, coming across with drugs. I saw kids playing. I saw people where I have a connection with. As the father of a border patrol agent, you think about him. He's risking his life. They work in the most dangerous parts of our border and they're away from their families. And they're exposed to, all of them, bullets, knives, and at times, whatever. People who have a connection with them. I understand

What's New In AutoCAD?

Markup Assist: Assist you in creating and editing AutoCAD drawings by providing annotation and editing capabilities in the drawing window. AutoCAD Architecture: The ability to design and document traditional building projects in AutoCAD Architecture as well as a wide range of other architectural design software (e.g., ArchiCAD, SketchUp) and design platforms (e.g., BIM, Revit). (video: 1:20 min.) AutoCAD Plant 3D: The addition of a full-featured, Plant 3D modeling environment to AutoCAD Architecture. AutoCAD Mechanical: All the tools you need to make complex mechanical assemblies. Draw 2D, 3D, and 4D shapes, create complex assemblies and use all the tools of AutoCAD Mechanical. AutoCAD P&ID: The addition of a full-featured, P&ID environment to AutoCAD Architecture. AutoCAD Plumbing & Electrical: Many of the plumbing and electrical tools available in AutoCAD Mechanical are now available in AutoCAD P&ID. AutoCAD Structural Analysis: The ability to perform static and dynamic structural analysis with higher levels of complexity and control than ever before. AutoCAD Surveying: Add landscape, building and architectural surveys to your drawings, and easily convert from one software package to the next. AutoCAD Tagging: Use tagging to organize your drawing and notes into your own custom filing system. AutoCAD Text: Bring your designs to life with a revolutionary type system that supports a wide range of characters and styles, including most of those you would expect and many more. AutoCAD Visualize: Re-create the full color spectrum of your most demanding 3D models. Software Updates: Zoom Info: Find what you need faster. Zoom Info can help you to navigate your drawings with a powerful and easy-to-use feature that looks for objects of interest based on their locations, sizes, names, and other data. You can open an existing instance of Zoom Info and then immediately jump to a location, a size, or any object in your drawing by typing its name or a few letters of its name. You can search all drawings of a
