[ [Click here for information about AutoCAD on mobile and web](#) ] AutoCAD LT (2003) was a reduced feature-set version of AutoCAD that runs on personal computers (PCs) with the Microsoft Windows operating system. In 2009, Autodesk released AutoCAD 2010 to replace LT, featuring a new UI design based on the Metro design language, expanded capabilities, and better integration with Microsoft Office. [ [Click here for more information about AutoCAD LT](#) ] In 2015, Autodesk launched AutoCAD Architecture (formerly AutoCADeccentric). This plugin is designed for architectural and interior designers, industrial designers, model makers and engineers to add architectural features to their drawings, such as 3D Building Information Modeling (BIM). What is the history of AutoCAD? AutoCAD was first introduced to the public at an annual user conference held in December 1982, and was officially released in 1983. The program was developed by Steve Lindoff and Bill Sikes at Autodesk for the Apple II home computer, and later ported to the IBM PC. The company then produced one or two editions of the software for the 8-bit microcomputers of the day, the Apple IIc and Commodore 64. By 1987, the program was first available for the IBM PC platform. For the first five years of its existence, AutoCAD was strictly for drafting and is not suitable for creating drawings of any kind. It was developed to create drawings on desktop and server-based CAD workstations. It has also been used on desktop workstations in places such as hospitals and factories, where it can be more convenient to have one drawing suite on the desktop rather than having separate desktop or server-based applications. In 1994, Autodesk released AutoCAD LT, which featured a subset of the features found in AutoCAD. The objective was to provide CAD users with a more inexpensive option for desktop usage and meant that AutoCAD LT is no longer compatible with AutoCAD's core functions. The license fee to use AutoCAD LT is significantly less than the fee for using AutoCAD, so Autodesk has sold more LT licenses than AutoCAD licenses in the past. Since 2001, the application has been available for Windows-based PCs with 64-bit versions of the operating system, such as Windows 2000, XP and Vista. AutoCAD 2008 introduced support for Windows Vista

Microsoft Access Microsoft Access supports customizing and automating using VBA and .NET. It also supports programmatic access to the forms and controls that are part of the user interface (UI). There are built-in functions for creating, opening, closing, adding, removing, and moving pages. Microsoft Access can be scripted using VBA and .NET. Access allows users to perform the same tasks as AutoLISP, VBA, and .NET. They can create a user interface, automate it, and access forms, controls, and databases. Programmatic access is facilitated by the Microsoft Access Database Engine and, more recently, the Entity Framework. AutoCAD Product Key R14 and later versions support plugins, which allow for runtime customizations, creating interface extensions, and visual integration with Visual Studio. AutoCAD LT AutoCAD LT, Autodesk's free technical drawing software for the home and small business, supports programming with both C++ and Visual Basic. It also allows for customizing and automating the user interface. The user interface is written in a language called LC, which is the low-level language for AutoCAD LT. A free plugin called DXFPlus was released by a private company called DXFPlus. The company claims to have written the plugin for "AutoCAD users" and to have "used [their] own custom and unpublished technology". The plugin adds support for all of the most common standard DXF file types, as well as some proprietary file types. AutoCAD Architecture AutoCAD Architecture is a third-party application for creating computer-aided designs, including architectural and mechanical drawings. The software is offered through a Web site, and can be installed on Windows, Macintosh and Unix systems, as well as on a web server.

Architecture supports the programming languages C++, Visual Basic, Java, HTML and other programming languages, and includes functions for drawing the user interface and manipulating the layers, blocks, and components. Architecture also includes its own proprietary database for storing the design, and a "pre-rendered" version of the graphic interface, called a "paper stencil". Open the program and select "Enable the Autodesk Online Services" option. On the bottom left, click "Online account settings" and you'll see your account details, a button for creating an Autodesk account, and a button to login. Click "Create Autodesk Account" to create a new one. Now you will need to download the client software. You can download the client software from here. Select the right version for your operating system. Go to the Client software page, and choose your operating system. Launch the executable. Enter the serial number and press the "Next" button. Choose the "On-premise installation" option to install the software locally. For more information: A: Turns out it's pretty much dead and buried. (Though some of the pages still work.) Q: Bug while trying to make a regression test from a stored procedure using SQL Server Profiler I'm trying to see how SQL Server Profiler behaves when I issue a SELECT statement against a stored procedure (my test query) with a parameter (value) set to NULL. However, I can't see the parameters from the profiler and the results that I want are not even recorded. The issue is about a stored procedure with two parameters. In some cases, one of the parameters value is NULL. That is, when I execute a SELECT statement against the stored procedure and a parameter set to NULL, the stored procedure returns NULL and I'm expecting to see some profiling. But this doesn't happen at all. Why is that happening? Is there anything I could do to see the parameters from the stored procedure? A: The profiler shows a column for every column in the select. You can't see the parameters, because they are not columns. If you are using SQL Server 2014 or newer, you can turn off the parameters column in the profiler. See below: Right click on the column in question and select "Hide Column". SQL Server 2008 Enable parameters for the select statement. Turn off the parameters column
