Many US businesses and institutions use AutoCAD to create models and drawings. AutoCAD is also used in a variety of fields to create engineering models, drawings and 3D graphics, as well as in the construction industry to create site plans and architectural designs. AutoCAD and Autodesk's other products were acquired by Autodesk in 2001 for \$3.4 billion. History The first release of AutoCAD, known as AutoLISP, was completed in 1982 by a team of Autodesk employees led by Bill Gates. In 1982, the first release included features such as block-structured editing, and graphics formats such as DXF, MDX and DWG. By the time AutoCAD was released, many CAD tools were in use, including MAYA by Multisys, which was released in 1979 and still the only other desktop CAD program for the microcomputer market. Users could make drawings using standard conventions, such as the requirement to start each drawing with the number 1, to indicate a top-down view of the drawing. The 1983 release of AutoCAD, which was priced at US\$1500, was the first application that allowed users to draw models in 3D using a top-down or side view. It was based on a 3D engine developed by Autodesk employees Carl Bass and Bill Bass. The AutoCAD price dropped to US\$1000 in 1986. In 1987, a pre-release of AutoCAD for Windows was presented. The development of AutoCAD went parallel with development of the Windows environment, and it took longer than expected to bring it to market. With the release of AutoCAD for Windows in 1990, the software finally worked on IBM-compatible personal computers. This first release of AutoCAD supported only 2D drawing functions. In 1994, the Windows software was first offered in a completely new design and, at the same time, it started running on Macintosh computers. The Macintosh AutoCAD software was first released in 1995 and it is the only CAD software that is still offered for the Macintosh. AutoCAD won several industry awards, including the Autodesk Awards for the best use of technology in 2006 and 2007. The following year, the X Prize challenge was announced to build a fully automated car. Two separate teams, Symbolic Systems and Cola and Elmer, claimed to have made a software application that could create CAD

, aka "AutoCAD", is a 3D-modeling and 2D-drafting program, part of the Autodesk 3D product family. The program and its various add-on products are available for PCs, Macs, iOS and Android. The latest releases of AutoCAD are available as a full product, or as AutoCAD LT, a freebie version with fewer features. AutoCAD LT's pricing structure (which includes annual updates) resembles that of the two previous free versions: AutoCAD was released in 1991 for MS-DOS, and AutoCAD 2000 (released in 2000 for MS-DOS and Windows) was released as a limited free version. AutoCAD 2009 for Mac was released in 2009, and the first year of the program's full price of US\$749. AutoCAD 2010, released in 2010, was available as a free upgrade from the previous version. AutoCAD 2012 was released in 2011. AutoCAD 2013 was

released in 2012. AutoCAD 2014 was released in 2013, after AutoCAD 2009 was discontinued. AutoCAD 2015 was released in 2014, and AutoCAD 2016 was released in 2015. AutoCAD 2017 was released in 2016. AutoCAD 2018 was released in 2017. AutoCAD 2019 was released in 2018. AutoCAD's usage has grown beyond 2D drafting and 3D modelling to include architectural and structural design, mechanical design and civil engineering. Some of the capabilities in later AutoCAD releases include support for non-drafting users. Non-drafting features include: Reverse engineering Creating custom drawing templates Creating scalable drawings with page layouts Supporting two-dimensional and three-dimensional formats Embedding DWG, DWF, DWG, and BMP files Opening of email attachments In addition to AutoCAD, AutoCAD LT and other Autodesk 3D offerings, a number of third-party products are available from companies including third-party developers who have added features to the core AutoCAD product. These products include: SketchUp — a free 3D modeling software application from Google that is in active development Adobe AutoCAD 360 3D Studio Max Google SketchUp Omnigraffle Inventor Grasshopper 3D FreeCAD FDM3D Maxon's Cinema4D Due to its popularity and cross-platform capability, AutoCAD has been ported to Android, ca3bfb1094

In recent years, studies on and tests for HIV infection have focused on the genetic characteristics of the causative agent of AIDS. HIV causes AIDS and has a group of the causative agents. As to the genetic characteristics of HIV, they are as follows. (1) The nucleotide sequence of the retrovirus is known (Nature, vol. 314, pp. 557-559 (1985); Proc. Natl. Acad. Sci. USA, vol. 83, pp. 6560-6564 (1986)), and has been cloned and sequenced (Proc. Natl. Acad. Sci. USA, vol. 85, pp. 2429-2433 (1988)). It has been shown that AIDS is caused by a retrovirus which is obtained by substituting five amino acids into the gag region of human immunodeficiency virus which was previously discovered by us (HIV1-M) (Japanese Patent Application Laid-Open No. 128171/1989). It has been also shown that the cross-hybridization of human immunodeficiency virus (HIV1-CA) causes AIDS (Cancer Research, vol. 51, pp. 3686-3692 (1991)). In relation to the detection and isolation of HIV, studies have been also conducted on the detection and isolation of defective virus particles such as vesicular stomatitis virus and vesicular encephalomyelitis virus. Based on the genetic characteristics of HIV, the following methods for the diagnosis of infection with HIV, and for the detection and isolation of HIV have been developed. (1) Isolation of the protein in the early stage of infection from patient's blood, and diagnosis of the presence or absence of the protein (J. Natl. Cancer Inst., vol. 82, pp. 1344-1347 (1990); Methods in Enzymology, vol. 154, pp. 343-352 (1987)). (2) Detection of nucleic acid using a hybridization technique (J. Infect. Dis., vol. 158, pp. 1379-1383 (1988)). (3) Isolation of defective virus particles containing only gag genes (J. Virol., vol. 63, pp. 4605-4613 (1989)). (4) Isolation of defective virus particles containing gag, pol and env genes (J. Virol., vol. 63, pp. 1251-1255 (1989)).
