The visual appearance of the software was initially called Draftsman, but the name was changed in 1985 to Autodesk AutoCAD. The name Autodesk is an acronym for "Automatic Digital STEllar Creation" and stands for an intelligent digital network of communications and collaboration among multiple disciplines. It is a registered trademark of Autodesk, Inc. (the company) or Autodesk, Inc. (the company). AutoCAD's predecessor, ACADe, was developed by Autodesk and first released in 1979 as a desktop app running on microcomputers with internal graphics controllers. Before ACADe was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD has been the most popular and widely used CAD program, with more than 30 million users as of 2019. It is marketed as the primary CAD application of the Autodesk Suite family, and is available as a free trial version, a subscription version, and as a perpetual license. There are more than 500,000 current users of AutoCAD. The majority of those users are in the United States, with about 20% in the UK and a few in other countries. About 1% of users are in the Autodesk family. The average user is likely to be male and over 30 years old. In 2019, Autodesk surveyed more than 40,000 AutoCAD users, and found that 94% of them use AutoCAD for design work; 75% use AutoCAD for prototyping; and 32% of AutoCAD users use it for animation and simulation. AutoCAD is used by 2,300 corporations worldwide. The "Acronym Dictionary" of the Acronym Finder. Launch In 1990, Autodesk introduced a personal computer version of AutoCAD, AutoCAD LT. External interfaces In addition to interfaces within AutoCAD itself, AutoCAD supports a number of external interfaces for connecting to various other applications or platforms. Application Programming Interface AutoCAD has several different APIs. The most commonly used in Autodesk products are VBA and AutoLISP. These APIs allow developers to implement their own scripting language based applications. AutoLISP AutoLISP is a functional programming language developed by Autodesk in 1986. It is an interpreted or compiled language supported on the following operating systems and operating systems: Mac OS X (Mach for PowerPC), X Window System (UNIX), Windows (MS-DOS for IBM PC, Windows 95, Windows NT, Windows 2000) Microchip PIC16F877 Intel PIC18F National Semiconductor 68000 IBM Zilog Z80 (for CHRP) PC-based minicomputers with an 80286 or 80386 processor In most recent versions of AutoCAD, users can configure an operating system to support AutoLISP as a Windows scripting language. It is a fairly simple, text-based language, using many of the same commands as BASIC, with only minor differences. AutoLISP has been used by users to create applications which modify the built-in functionality of AutoCAD in various ways. AutoLISP has been superseded by AutoLISP 2, which was released in 1995 and was the first to support access to the AutoCAD API, allowing scripts to make use of functions from the API. VBA The Visual Basic for Applications scripting language was developed by Autodesk in 1988. It is based on Visual Basic, an object-oriented development environment for Microsoft Windows, and has a similar syntax. Its object-oriented nature allows for automation of most operations in AutoCAD. VBA has many of the same features as Visual Basic, but has more limitations. It is used by developers to create forms or screens with information that can be drawn from the AutoCAD database. In addition, functions can be called from the AutoCAD application, to perform additional tasks.
