The program sets up third-party elements While the installation is uncomplicated and requires little effort from your side, the app is ad-supported, which means it installs third-party components. Sadly, they can't be turned down as there are no such options included in the setup. Once the process is complete, the screensaver is added to the Windows Screensaver window list, from where you can set it as a default or make further changes. Enable the rendering function Like the title implies, the tool provides an animated Christmas tree decorated with bright lights and surrounded by falling snow. From the configuration panel that comes along with the app, you have the option to stretch the image in case it doesn't properly fit. The display and sound properties are divided into two distinct menus. The first category shows the video adapter name and offers the choice to disable the 3D rendering option. The "Help" button analyzes the adapter's ability to use the render function. Pick the correct screen resolution In addition, you can choose to leave the display resolution on automatic or manually select the desired parameters (e.g. 640x400, 800x600, 1024x768, 1360x768). From the second menu, the app lets you tweak the sound volume, which may work on some computers. It would've been nice if you could customize the sounds, along with the snowflakes speed. On an ending note Taking everything into consideration, Christmas Serenity Screensaver Free Download is a fun utility that brings a stunning and serene Christmas landscape, with a bright tree, and a traditional house in the back. Despite its impressive color palette, the offered functions are few and leave much to be desired. Field of the Invention The present invention relates to a steering ratio control apparatus for a marine vessel propulsion device. 2. Description of the Related Art A conventional steering ratio control apparatus (an adjustable rudder system) for a marine vessel propulsion device (for example, see Japanese Unexamined Patent Application Publication No. 2006-169857) is provided with a motor for driving the rudder of a marine vessel. The amount of rotation of the motor is set so as to be in accordance with a steering direction and a steering angle of the rudder. The rudder angle of the marine vessel is a function of the amount of rotation of the motor. When the rudder angle is thus controlled to provide a desired amount of rudder angle corresponding to a desired steering direction and steering angle, the balance and stability of the marine vessel can be maintained well. However, in the aforementioned conventional steering ratio control apparatus, even though the amount of rudder angle can be controlled while the marine vessel is traveling in an intended operation state, that is, even when a control actuator (a rudder angle control system) is driven to provide a rudder angle equivalent to the control target amount of rudder angle of the rudder angle control system, the position of the marine vessel deviates from the control target position due to, for example, a failure of the control actuator or an error in a detection value of the control actuator. In this case, the position of the marine vessel, or the tip position, may be reversed excessively b7e8fdf5c8
