Unfortunately, there is no clear definition of a software architecture, no standard framework for describing software architecture, and no standard notation for indicating the presence of software architecture. Software architecture is concerned with the design of the software structure or architecture, i.e., of the components within the overall software system (with their interaction and composition), their placement, their dependencies, and their inter-connections. Software architecture also refers to "the functional and geographic location of the major [computer] operations of a software system... [that] encompasses the architectural modeling of the overall software." The Software Architecture Framework (SAFe) is a new approach to software architecture that provides analysis, documentation and design capabilities that help you create architectures that scale and are resilient to change. SAFe consists of five core components, which are illustrated below. Software architecture and system engineering are two different aspects of the software engineering process. Software architecture creates the software-related designs of the system, and system engineering constructs those designs. Together, they provide the blueprint for a system's functionality and interrelationships. What is Software Architecture? Software architecture is an important aspect of the software development process. One of its primary goals is to ensure that the resulting application is reliable and flexible enough to accommodate changes over time. The Software Architecture Framework (SAFe) is a popular software architecture approach that addresses the challenges and issues surrounding software system development. Software Architecture Framework, Software Architecture A framework is a "set of conventions for expressing and discussing a software architecture. ".
