But if I use concrete class like: public class B extends A { public List getList() { ... } public void setC(C c) { ... } } I don't get any error. Why is that? Is that because of the new keyword used when extending a class? A: I don't get any error. Not necessarily. Your setters are not synchronized; you could end up calling getList and setCList on different threads. Devil May Cry 4 Devil May Cry 4 Download full DVD. Review. by Jason.. 29 Aug 2009 Review.Â Â Â Devil May Cry 4 is a game that I grew up with.Â Â Â the US release which is retailing as Devil May Cry 4: Special Edition, is planned for Download devil may cry 4 full rip skullptura torrent devil.may.cry.4.full-rip.skullptura free download(1) Field of the Invention The present invention relates to a method for producing a porous silicon wafer, and more particularly to a method for producing a silicon wafer which is provided with a porous layer of a large size and a smooth and flat surface of high quality, in which the porous layer of a large size of high quality is obtained by causing the formation of an insulative layer on one surface of a monocrystalline silicon wafer, and causing the side surface of the insulative layer to expand laterally, and which has small voids formed in the layer by anodizing the wafer. (2) Description of the Prior Art A conventional method for producing a porous silicon wafer is shown in FIG. 1 of the accompanying drawings, in which a monocrystalline silicon wafer 1 is subjected to a hydrofluoric acid etching treatment to form a porous layer 3 on one surface thereof, as shown in FIG. 1(A), and the porous layer 3 is further subjected to a chemical etching treatment by immersing the wafer 1 in a mixed aqueous solution of hydrofluoric acid and nitric acid to form a smooth and flat surface of the porous layer 3, as shown in FIG. 1(B). The etching time is generally about 120 min, but is preferably about 10 to 60 min. However, the chemical etching proceeds only to a depth of from about 100 to 300.mu.m, but if it is desired to obtain a porous layer of a large size, then the chemical etching time is usually prolonged to cause the formation of a large number of fine voids, to a depth of from about 300 to 1200.mu.m. FIG. 2 shows a porous silicon wafer produced by the above-mentioned known method. The surface thereof is rough, and the number of voids is more than 10.sup.8 per square cm. Therefore, the porous silicon wafer thus
