Druid

Druid is an easy-to-use application that enables you to create databases in a graphical way. Users can add tables, fields, folders to group tables and can modify most of the database options that follow the SQL-92 standard. In addition to sql options, you can document each table and each field with HTML information. Once the database is created, the druid can generate:

- HTML documentation: for all tables, with browsing facilities
- PDF documentation: for all tables
- Java classes: (one class for each table) that contain tables' constants (such as fields size) plus java code added by the user
- A data dictionary that contains all tables and fields present in the database
- SQL script which contains all table definitions that can be piped to the DBMS.
