HyperMotion Technology is not a game-changing feature on its own, but when you combine it with gameplay enhancements from Fifa 22 Serial Key, such as player intelligence, positioning and ball physics, along with increased player speed, enhanced animation and new dribble controls, you get the highest-quality football match on PlayStation 4 and Xbox One. Below are highlights of some of the new game features set to be introduced in FIFA 22. We're calling it FIFA Player Intelligence. We've been working on improving the behaviours of our in-game player models, from defenders who man-mark certain players to players who hold up the ball and set up an attack. The challenge has been to capture the essence of their personality in-game, while making sure their skills and techniques perform as they do in real life. This season, your players will have more personality in-game. Whether it's a player like Chelsea's Victor Moses, who is quick on the ball, agile and strong defensively, or our 2014 World Cup winner Lukas Podolski, who is a complete weapon in the final third, your players will show more of their personality and more of what makes them unique. What makes your player unique and characterful are their personality traits – things such as goal-scoring, trickery, composure, play-making ability and how quickly they can find space. With FIFA 22, we've reworked these to allow for an even better understanding of your player's unique traits. For instance, if you select a player who is excellent at trickery, he will dribble the ball forward with greater frequency than others with the same gameplay skills. He may also be more opportunistic in his approach, having the ability to take his opponent by surprise with his quick thinking. As another example, a player who is excellent at play-making will call more passes than others with the same skill level. How often those passes are successful depends on the player's ability to dribble and move the ball through space. We're calling it Player Intelligence. Take a look at the statistics for these two players below. The game will take into account the player's attributes and show you which traits they tend to have in-game. As you can see, if your players
