What's New in the?

GT Restaurant Reservation Software is designed for use by restaurants, hotels, resorts and other establishments that have table reservations to fill. This is a major task in every restaurant. It makes the tables available at the right time so that the guests will get to their table at the right time. The software has the capability of tracking your day-to-day and weekly sales as well as monthly income. The software has all of the standard features that one would want in a restaurant management and reservation software. Some of the features are booking reservations, finding tables/seats with reservation numbers, printing and saving reservations with detailed information, staff calendars, and special customer event functions. All in one reservation management and booking software that can be accessed from any computer with Internet access. Toxicity of household paints and their use in leaded brassica cultivation. An experiment was conducted to study the toxicity of various lead-based paints in the presence of leaded Brassica. Five different brands of paints and their housekeeping manuals were studied. The paint formulations used were Reemay 325 (ERG), Reemay 300 (ERG) + 6 % Reemay 325 (OR), Reemay 300 (ERG) + 5 % Reemay 325 (OR), Reemay 300 (ERG) + 10 % Reemay 325 (OR), Reemay 300 (ERG) + 30 % Reemay 325 (OR), and

Reemay 30 (USP). Tests were conducted to determine the effects of these paints on plant growth, leaf physiological parameters, and uptake of lead from soils in which the plants were grown. The qualitative analysis of paints by X-ray diffraction (XRD), powder X-ray diffraction, field emission scanning electron microscopy (FESEM), energy dispersive X-ray spectroscopy (EDS), and Fourier transform infrared spectroscopy (FTIR) confirmed their composition. The tests showed that the paints tested caused significant reductions in growth, in the concentration of water and minerals in leaf tissues, and the uptake of lead from soils. The concentration of lead in leaves exposed to paints above the permissible limits was as high as 1119 ppm. The use of paints was stopped only when the concentration of lead in the leaves was below the permissible limits. The results were compared with lead concentrations in leaves of house plants grown in soils contaminated with pure lead. Results indicated that the levels of lead in houseplants were significantly higher than those of the exposed plants.[Diabetes mellitus and
