This article will show you the complete process of installing the Kordil Document Management System into your server. If you have the MediaWiki extension already installed, you will first want to have the Kordil Document Management System installed on the same server because it is not possible to use the extension and the Kordil Document Management System on two separate servers. Kordil was developed based on the open source MediaWiki extension, and the User Interface has been carefully crafted to fit the particular needs of a documentation website. Kordil is completely free but has a number of included features that can be used in a commercial environment. A number of Kordil's features include: Full text search over all the documents The so called Document Component Structure as opposed to the flat list table structure User, group and Role based access control Translation specific support The ability to import and export documents in a number of different formats, including eXtensible Markup Language (XML), Tab-Delimited, Text, Rich Text, or Microsoft Excel Export of documents to PDF, JPEG, BMP, PostScript and other formats Document componets are templates for creating a new document that might contain all the content that needs to be created for a certain article, a process known as compounding. Document versioning Image cropping Alternate text and alternate links Just to prove that Kordil can work with MediaWiki, the video below shows MediaWiki compounding a new document (that has NOT been customized with Kordil yet) and then compounding a customized new document. INSTRUCTIONS During the installation of Kordil, you will need to go to the location of the MediaWiki extension. We strongly recommend that you maintain that directory under the same root that holds the Apache server so that the directories will be as close to the same as possible and the links between the two systems will be as strong as possible. The following sections are for those of you who already have their MediaWiki installation working, and some others who need to go through the installation process. Installing Kordil for a user with their own custom MediaWiki install: Go to the location of the MediaWiki extension in the server where you wish to install Kordil Download the Kordil Custom Install script - located on the Kordil website for direct download A second download is required for the Kord b7e8fdf5c8
