powerful and professional equation editor for the Adobe InDesign. Is this part of the reason you haven't been going in as much lately? I am curious as to how you feel about a new series you like called Magic Mike. It is in 3D....I don't know if I could watch one of those. Another series that you probably won't like is Netflix's new "Dinner for Schmucks". That is not my thing at all. Well yeah, that's a common misconception. I don't like them because I think they're just creepy. I didn't like Gas Lamp when they made it, I didn't like Rain Man, I didn't like Freaky Friday, I don't even like Step Up. They're just not what I enjoy. Well yeah, that's a common misconception. I don't like them because I think they're just creepy. I didn't like Gas Lamp when they made it, I didn't like Rain Man, I didn't like Freaky Friday, I don't even like Step Up. They're just not what I enjoy. I like the concept of Dinner for Schmucks. I like when you comment on other movies, which would be the case if you liked it.

Sorption of polybrominated diphenyl ethers in unsaturated and saturated soils. The sorption of polybrominated diphenyl ethers (PBDEs) in unsaturated and saturated soils was investigated to find the sorption-relevant parameters and factors in contaminated soils. The sorption of PBDEs in soils shows two significant correlations with the concentrations in soils as well as the changes in  $K(D)$ . The results indicate that the sorption of PBDEs in soils would be a significant factor in determining the fate and behavior of these compounds in the environment.

Magic Pro 8.7.1.47 for Adobe InDesign is an equation editor mainly for use with Adobe InDesign software in editing any mathematical<sup>Â</sup>. Math Magic Pro for InDesign Edition v8.7.1.47 Full Version

Q: Mockito thenReturn() fails when test returns a value I am trying to unit test a method I wrote that looks like this:

```
private void doWork() { ... Product product = new Product(productId);
    product.setName(testName); ... // Will be calling
    Company.doWork() company.doWork(); // test
m.thenReturn(product); ... }
```

I want the test to check if the product is updated correctly. However, when I run the unit test I get a `org.mockito.exceptions.base.MockitoException: Mockito cannot mock this class: class java.lang.Object` Do I miss anything here? Does Mockito support this? I want to avoid using PowerMock as my test env is JUnit5. Edit: This is a simplification, I am actually using a List to test concurrency, but I want to extract the essential parts here.

A: You're returning an object and Mockito cannot mock final objects. Make Product final and your code should work fine. Note that an even better and more testable way to implement such a method would be:

```
private void doWork(Product product) { ...
    product.setName(testName); ... // Will be calling
    Company.doWork() company.doWork(product); // test
m.thenReturn(product); ... }
```

As said in comments, it would also be worth considering Dependency Injection to make your code easier to test.

Q: Are all transitive triplets even? I came across a statement that says: Transitive triplets(any triplet that makes a triangle):  $\{(x,y$
