Nov 18, 2019. ps3_packages.patch. 4.21 Patch??.Q: How to save Client files for future use in c#? i
am trying to create a program that keeps track of the history of events of certain information and of
the user's time spent on this information by dividing the time into 1 minute increments. Each
"history" file, to be saved on the user's computer, will contain an array of strings formatted like this:
(UserID)(DateTime)(Values) Currently, I am using a stringBuilder class to construct this array in my
Form Load method: `StringBuilder historyBuilder = new StringBuilder();` `foreach (String[] h in`
`userControl1.History.Items) { if (h.Length!= 0`
`stringBuilder.AppendFormat("(UserID)(DateTime)(Values) \r "); h[0] = h[0].Substring(h[0].IndexOf(")`
