Here's an introduction to what you can do with AutoCAD. 2D Drafting/CAD Drafting 2D CAD drawing and drafting is the simplest form of 3D drafting. 2D CAD or drafting can be used to make technical drawings, as well as 2D architectural drawings. The line that connects any two points on the drawing is called a "line" or "straight-line," but what distinguishes 2D CAD from other forms of 2D drafting is that the lines can be curved or angled. When a 3D model is created from the 2D drawing, the 3D shape automatically fits inside a box or other geometric shape. With 2D drafting, two different lines can be connected by using straight and curved lines. Straight lines can be represented by thick or thin lines; the thickness of the line depends on the "pen pressure" that you apply to the drawing tablet. When you add a curved line to the 2D drafting drawing, its shape changes from a straight line to a curve. The end of a curved line is called a "nod." A line can also be represented with a 3D object. Three lines in a horizontal, vertical, or diagonal direction are called "contour lines," and they often form a 3D shape. You can use multiple contour lines to make a 3D shape. 3D Modeling/Drafting To create a 3D model, you first make a 2D drawing or drawing that depicts the model. An example is a building. 2D drawings that form the base for 3D models include "layers," which can be used to layer or "add" components, such as

This model required developers to sign a software license agreement (SLA) with Autodesk when creating a new application for a new license type. The software license agreement (SLA) would then be submitted to Autodesk's government department in the jurisdiction the software was being developed and installed. This license model was used until the release of AutoCAD 2010. In addition to the SLA, the AutoCAD Architecture products required a Visual Studio template license and a Microsoft.NET Software Development Kit license. Each time a new version of AutoCAD was released, the software license agreement (SLA) changed. For the AutoCAD LT (2003) version and AutoCAD 2000, the license model was called a "standard" license. This was a non-proprietary license. From AutoCAD 2003, the license model was changed to "open source" and was accompanied by the GNU General Public License (GPL). This model still required developers to sign a ca3bfb1094
