Crazy Machines 2: Halloween

What's new in Crazy Machines 2: Halloween:

on 4th Street Crazy Machines 2: Halloween on 4th Street is a platform/puzzle video game released for iOS in May 2012. The game is the sequel to the original Crazy Machines which was released in 2009. The objective of the game is to guide the Agent on a street level using his ability to turn ordinary household appliances into robotic servant masters. The player causes mayhem to unsuspecting citizens while somehow protecting them from seeing the products of his labors. Each game is set on a different map and the agent has a limited amount of time to complete the level before being shot by a fellow citizen. The objective in each level is to damage/destroy the house in order to advance the agent. Each level has a different amount of points the agent can earn. Throughout the game, the agent can earn toys/rewards which will ultimately lead to his employment as a Repair Mechanic at his employer. The game was written by Ryse Motley who worked on Crazy Machines, and was developed by Jawbone. Gameplay The game starts off like any other turn-based puzzle/platformer, and requires the player to guide the Agent along a street, solving puzzles (usually consisting of turning on/off switches to make inanimate objects do various things), and overcoming obstacles to get to the point where the targets are destroyed. The game is mostly satirical and will often put twisted forms of humor into one of two categories: Crazy Machines: A tongue-in-cheek approach to glitches/random events in traditional video game genres. For example, the game will allow items to simply fly out of the screen and attack the player or innocent citizens. Crashes and other random errors will be parodied in the game as well. The effects of these events may be rectified in hilarious ways that the player might not usually expect to occur. Halloween: A more serious event which is opposite of the first type of events. A series of deadly events will occur throughout the game, and damage is relative to size, position, and more. Players have only a limited amount of time to clear a level, and

entire patterns/circles need to be eliminated. The player needs to progress through a level without dying (otherwise, he would be restarted at the beginning and the game would continue). Citizens will taunt the player on his way, and every time the Agent is successful, somebody dies, or otherwise is killed. Eventually, the Agent has to make it to a Repository
