(Image credit: Adobe) Guide to Photoshop: A Beginner's Guide What the heck is Photoshop, anyway? Photoshop is the equivalent of Photoshop is the equivalent of MS Word for graphic artists. It is the industry standard for manipulating raster images. It's an indispensable tool for designers, photographers and multimedia creators alike. Photoshop now runs on a desktop only, but its roots go back to film development where the tool invented by Thomas Russell was the first digital camera editing system to support sequential editing of multiple frames. In the mid-1990s, Mac's QuickTime VR software co-founder John Warnock introduced the layer-based development system for digital work. Photoshop was developed concurrently, creating a user-friendly digital imaging program. With layer-based editing and its range of functionality, it's the most popular of all image manipulation programs. Adobe Photoshop CS5 offers much more than what its predecessor Photoshop CS3 offered, including 10 times the number of layers, more tools and more importantly, the introduction of the Content-Aware Fill and Content-Aware Move tools. One of the most impressive features is the Content-Aware Fill tool that allows for one-click auto-fixing of errors such as misplaced text. With just one click, a photo can be made crystal clear. Earlier today, the CEO of PayPal, Dan Schulman, announced the company was shutting down all enterprise payments, PayPal's core market, and "gaining an unprecedented amount of visibility on the types of payments being made". In the process, he asserted that hackers were using PayPal to launder money and steal funds. "Our combined payments & risk programs are the largest in the world with a combined \$1.27 trillion in global AUM.... I would argue that it is time to take more aggressive action with our customers and prospects... To that end, starting in Q4, our Enterprise Services division will be shutting down all Enterprise Payments." As part of the move, the company will reposition itself as a technology company and will launch a platform called PayPal Core. And it would appear it's moving to offer tech firms the ability to pay for services by the minute. That's right -- instead of being in the market for a large fee for a monthly fee for services you need it to provide, you'll be able to hire a PayPal support partner and pay by the minute. This is likely to be aimed at third-party developers and systems integrators, though if a payment processor can adapt to the market it will be able to play with the big boys. If you look at the company's historical growth rates, it is striking how fast it grew into a \$2bn company. Clearly, the move to a tech company has been in the works for some time and the move to a platform via PayPal Core will be very interesting to watch. Anyway, I have some code below and what I'm trying to do is have each item in the array be used in the case statement to determine which random element the function should return. I'm not quite understanding how the return works in the case statement. The code is below. public class test { public static String[] RandomString(int size) { Random random = new Random(); String[] mystrings = new String[size]; for (int i = 0; i

I want it to remain on the background forever. When i use a broadcast receiver, it's always called even when i don't have a connection. I want to make it invisible (just exit from the stack) so no activity will ever be started is it possible to do that? A: Broadcast receivers are for receiving broadcast signals. They are often used to react to changes. If your device state is the kind of state changes, you don't need Broadcast receivers. If you want a behavior that is triggered whenever the connection state changes to DISCONNECTED, use a bound service. Genotyping of human papillomavirus among female sex workers in Rio de Janeiro, Brazil. The aim of the present study was to investigate the presence of HPV among female sex workers (FSWs) in Rio de Janeiro, Brazil, from January to September 2001. Epidemiological data were collected by a structured questionnaire, and viral infection was detected by the hybrid capture II assay (Digene Corporation, Gaithersburg, Maryland, USA). The identification of HPV types was performed by PCR followed by RFLP analysis of the L1 gene products. The overall prevalence of HPV
