Layer-based editing. Photoshop manipulates images in a layer-based system. Basically, you cut out an object or an area and paste it over what you want to use, or cut out what you want to use and paste it over an area that you don't want. If you have a layer with a star on it, you can move the star to another layer, duplicate it, and then move it to a different layer. You can move, distort, cut, and paste many layers on top of one another just as you would with a paper sketch. While you're editing the image, you can view each layer in a separate window and move, change, remove, or adjust any aspect of any layer independently of the others. (You can delete layers, but you can never add them again.) There's no need to mess around with layers that you don't want or that are duplicates of layers that you don't want—by default, Photoshop keeps track of which layers are current. **Image size**. When you open an image from a scanner or a digital camera, Photoshop sizes the image to fit your screen. You can change the size of the image by using the dialog boxes in the Layers panel (described later in this section). You can also control how the image looks when it's displayed in your web browser by using Photoshop's Save for Web dialog box (see Saving for Web and Email). **Organizing files**. Photoshop files are organized into folders in a hierarchical way based on the type of file and what stage of development the image is in. For example, you might have a single folder for photos, a second folder for JPEG versions of those photos, and a third for the master file that was created from the JPEG file. In most cases, you can organize files in layers, so a layer called "People" might have multiple photos on it, and on top of that layer you could put some layers with effects applied to them. These organizational categories make it easy to work with groups of files and to manage files that you create and save. You can view the files in these folders by using the window on the left side of the Photoshop file browser window. Figure 3-3 shows the file browser window in Photoshop Elements 12. Figure 3-3. The Photoshop Elements 12 file browser window (left) displays a hierarchy of image files, providing easy access to photos (the top folder), JPEG images (the middle folder

Q: Changing the amount of time for community promotion ad At a certain point I just realized that the new Community Promotion ads don't go away after a certain amount of time. Is there a way to set a time for them to appear again? A: As it currently stands, they only come up for one 24-hour span. There is currently no option that lets you set up a recurring "promo ad" or determine how long it will last. There is a suggestion on Meta Stack Exchange (based on the meta.stackexchange.com site) that would allow you to promote a series of ads. This would be similar to a blog feature where you could post multiple news items on the same day, but would not be a like a comment area where multiple comments could be posted on the same day. While I do think this would be a useful feature, it is unlikely to happen (given the amount of work that would go into this feature). A: Update April, 2013: Beta Community Promotion ads (including the delete ones) will be added to the list of featured ad spots at the top of the Community Promotion Ads page. Each day at 9:00 PM UTC, the automatic ad feature will run and check for new featured ad spots, and, if a featured ad spot has been unoccupied for more than 3 days, an ad with a bootstrap snippet will be added. This will increase the number of new Community Promotion ads from 2 per day to 3 per day on average. Yes. This is based on the first suggestion on Meta Stack Exchange on the Community Promotion Ads post: The Community Promotion Ads are a special type of Community Promotion Ads... For the first time, the Community Promotion Ads will be automatically added to a user's profile when they are created. All users who are system moderators now have this feature. If you see anything in your profile that would be a good Community Promotion Ad, e-mail your suggestion to Community ♦ Ads ♦. If you have at least 10k reputation on another site, you can post an ad on that site to promote (or bash) that other site. Also, community promotion ad threads on Meta Stack Exchange are now marked [feature-request] on the Stack Exchange network. If they are, which is simpler, and why? A: Genetic and evolutionary algorithms are two different algorithms that use the same general idea. Both of them use computer-generated (or generated) genetic-type information (genotypes) to update (mutate and copy-delete) population members to generate (select, breed, and evolve) a new population. Evolutionary algorithms try to adaptively solve a specific type of problems that we generally solve with a genetic algorithm, e.g. games, and complex optimization problems. IOW, you can say that EA are genetic algorithms with the ability to adapt and evolve. If you have more questions about the advantages and disadvantages of genetic algorithms over evolutionary algorithms, take a look at the book by Goldberg on Evolutionary Computation that is referenced by the link from Wikipedia. (BTW, that Goldberg book was written by a GA expert from MIT and is the best 'engineering' book I've ever read on the topic.) You can find another good discussion of the differences between the two algorithms here: Differences between Genetic and Evolutionary Algorithms And a good resource about genetic algorithms is: Genetic Algorithms: The Definitive Guide by Goldberg and Holland A: A genetic algorithm (EA) is a he
