Using Common Photoshop Tools Photoshop is the heart of image editing and manipulation. On its own, Photoshop is a powerful tool. However, it also includes features such as layers, which make it easy to create elaborate layouts. In this book, I explain how to work with layers and layers such as the _layer mask_ and the _lasso tool_. These features are, however, only useful if you learn how to use them. This book is the place to start with Photoshop. The following sections go into more depth in showing you how to use many of the most powerful Photoshop tools. If

Windows 10 will be released in July 2015. New features and updates will be added to the OS as part of a regular software update. Some of them will be released via a monthly update while others will be released in between. App updates are published on a weekly basis and will be released on the same day all apps are updated. Windows Store customers will be able to choose which apps they receive updates for. They will see a list of new and updated apps on the Updates tab. (Instructions below) If a big update is on the release day, I'll also post it here. To access the Updates tab click the downward pointing arrow at the far right of the Start menu and type "Store" and then Updates. Windows 10 will also be available for download from Microsoft website. The download offer will end on June 29, 2015. With Windows 8 and Windows 8.1, Microsoft made

changes to their release process, which has made it confusing and sometimes really frustrating for users. Windows 10 is a major update and it will have some major changes compared to previous Windows versions. Some people think that Windows 10 will be more complicated to install, update and use. If you have any questions related to the new release, you can ask them here. Why Use Windows 10? Windows 10 will be a unified operating system with a clean interface and PC Edge. It will unify all apps, programs and features together. It will take away the traditional desktop and instead have a cleaner, more modern interface. Another big reason for using Windows 10 is that it will be the last Microsoft operating system to use Windows 7 and Windows 8. It will be available on a Windows Store, which is similar to Apple's App Store. It will be easier to install updates and security fixes, and download apps and games via a single program called Windows Store. Windows will be a multi-platform system, available on Android, iOS, Mac, Linux, Kindle Fire and Windows Phones. It will include innovative apps and an OS that will feel familiar to PC users. iOS 7 and Android 5.0 If you have an iPhone 4, iPhone 5, iPhone 5s, iPad mini, iPad (3rd gen) or iPod touch (5th gen), then you won't be able to use Windows 10 once it's released. Windows 10 will be available only on new PCs, laptops or tablets that are running 05a79cecff

This is the second post in a series about making a leather portfolio in March. There are a lot of opportunities to learn new things and get new skills here on this community. Like any forum, you will also see areas of discussion that are not always as professional as they should be. That is where it becomes fun to learn. My hope is this series can be a helpful guide for people who may be new to woodworking and wood art in general, and even seasoned veterans. For the sake of simplicity, I am going to use basic vocabulary and leave out all the fancy words and terminology. Please feel free to correct any terms you think are incorrect (unless you disagree with them, of course). The leather crafting portfolio I'll show you here is designed to help you learn how to make book folios. While most people know that the outer surface of a portfolio is usually finished leather, not everyone is clear on what the other interior layers are. Today we will use the book folio as the main focus to explore the different layers, and next week we will use the cover to focus on a different set of materials. The leather component is, of course, leather itself. This is what you have in your hands right now. Leather is not a single material, but is a family of materials. Leather can be like steak or like your karate classes. It can be like cow or like your favorite dog. It is a very diverse material which means there are a lot of different styles of leather to choose from. You can use any type of leather for this project. I chose to go with leather sewn together with stitch lines. I know this is not a precise type of leather, but the goal is to learn and have fun, not be accurate. The stitch lines are for show here, but if you wanted to actually make a book folio for commercial purposes, you could take a shingle stitch with a really long needle to eliminate the lines. There is a lot to cover in this project, so let's start with some general information and then dive into the specifics. Why make a book folio? A book folio can be a very useful, affordable, and rewarding tool for creative work. It has a special section where it stores and protects your book, and another interior and exterior which holds all the different things you put into it. You can create the document in a book folio, print it, and then put it

Q: What is the best way of getting the state of multiple TextBoxes? I am creating an application that dynamically adds buttons, TextBoxes and a Button to a user form. I need to know how to get the state of each TextBox and Button. For example, if one of the buttons was previously pressed, I need to know which of the TextBoxes were in focus. I could do this with a loop and looking for "True/False" values in the text boxes, but that will make my code unnecessarily long. I think I could use the Windows Form Designer, but I don't want to accidentally close the form while I am checking the state of the TextBoxes and Button. Basically, I am looking for a clean way to quickly check the state of the form. EDIT I am not looking for a "Button was pressed" flag; I have no UI buttons. I need to know which controls are in focus. A: You can easily get all the properties of a control: Control.Enabled Control.Visible Control.Text Control.Selected Control.Focused But note that TextBox.Focused will only return true if you've actually focused on the TextBox, i.e. the user has tabbed or clicked somewhere on it. For your purposes, you'd probably want to use Control.Focused. Q: VBA: Copy cells whose content has a different symbol in the cell below I have a worksheet that has a lot of rows of (copied) data. Let's say I would like to perform the following: For i=1 to 300 For j=1 to 10 If cell(1,i).value = "Lang" and cells(1,i).offset(-2,0).value = "Lang2" cells(1,i).offset(-2,0).Copy cells(1,i).offset(-2,1).PasteSpecial Paste:=xlPasteValues End If Next j Next i (The last two lines are just for illustration, so the problem is not with them). Now, I want to
