Talbot's line In analytic geometry, a line in a complex space is called Talbot's line if no two points of the line are reciprocally situated. The concept of the "Talbot's line" is named after the British mathematician Henry Talbot. Definition A complex line is a line in some complex plane. The simplest example of a complex line is the complex line at infinity of a complex affine plane. It is defined by for in a complex affine plane one obtains a line at infinity with the property. The term "Talbot's line" was introduced by James Joseph Sylvester in his monograph as the set of points of a complex affine plane that are mutually exterior to each other (see distance from a point). Thus Sylvester's line are the so-called externals lines, and the set of externals lines is the set of lines of a complex affine plane. References Henry W.S.
