History AutoCAD was created in 1982 by Michael Nygard and Paul Brown, from Veritron Corporation, and introduced in December 1982 as the first CAD program for personal computers running on DOS and microcomputers. It was first marketed as Personal Construction Engineer (PCE). It took 2 years and \$10 million to complete. It was originally priced at

\$2,995, equivalent to \$7,763 in 2019 dollars. PCE was first released on December 5, 1982, and did not ship with any extra costs for the programmer. It was downloaded by about 500,000 people within a few months, and around a million people by the end of 1984. Nygard and Brown's original plan was to make the application free, but they were afraid to alienate their biggest users, professional engineers. The

cost of manufacturing was estimated at \$60,000, with a profit of \$60,000. Later they decided to add a license fee so that professional engineers could continue using the program while the average home user could learn it. It was also estimated that the software would cost \$500,000 to \$1,000,000 for its first three years, including the cost of developing the app, editing the code, paying the

programmers, computer hardware, etc. These figures made the application seem expensive for a home user at the time, and the decision to charge for it caused many users to choose other programs. Since PCE's launch, AutoCAD has had many iterations and changes in technology. The original version of AutoCAD was originally distributed as a bundle with microcomputers, such as

the HP-48 and HP-58, and a few minicomputers like the DEC VAX11 and DEC PDP-11/23. In 1986, Autodesk announced plans to distribute PCE as a standalone application. It shipped the following year. Autodesk merged PCE with the 1982 application for desktop publishing, FreeHand, to create a bundled package of two separate applications. The package was first called Desktop Design. In 1990,

Autodesk rereleased Desktop Design with a new interface. It was renamed to AutoCAD for Windows. In 1992, Autodesk released AutoCAD LT (a half-size version), which was a response to the introduction of price-competitors like CAD DraftingSuite. With AutoCAD LT, Autodesk released a "power and feature set" (aka "upgrade")

What's New In AutoCAD?

AutoCAD 2020's Markup
Import and Markup Assist
features made it easier
than ever to send feedback

to your colleagues, improve the design, and share your feedback. In fact, they make it so easy that anyone can do it. Once you have imported the feedback into your drawing, you can edit it in your design software and print it to share your feedback. To create shared drawings with your team, we added the ability to import and send feedback as a drawing link. To update your design and share your feedback

with the whole team, you can now send the shared link and have everyone work on the shared drawing. A video tour: 1:15

Creating Dimensional and Drafting Shapes: New Dimensional Shapes and Drafting Shapes make it easier to create 2D and 3D models in AutoCAD. The ability to edit basic shapes and other drawings tools makes the shapes more useful. This, in turn, makes it easier to import

dimensions and Drafting Shapes into your drawings. (video: 2:20) Drawing Tools: We created new Drawing Tools, which can help to speed up your drawing tasks. We added basic drawing tools for line, rectangle, and circle. These tools are not only useful for creating simple shapes, but also for more complex drawings such as those with many curves. They are automatically added to the toolbar. We also added the

Set Square Tool. This tool will turn a line into a square. We created this tool so that it will automatically snap to the corners of the rectangular area. Video: 3:05 Active Dynamic Input: Onscreen keyboards provide on-the-fly input. Active Dynamic Input provides more control and flexibility than standard onscreen keyboards. Active Dynamic Input provides convenient onscreen keyboard features such as

word prediction, backspace, and more. In addition, you can change the input method to help control the input tools in your design program. To demonstrate this feature, we added a projector to our video. Onscreen keyboard provides on-the-fly input.
