Select the batch file to execute. The output of the script may appear in the Output window. Click Ok to exit the script. Repeat the steps from "3. Install the script" to "4. Click Ok to exit the script" until the script is done. If you receive an error, see the "Configuring the Script" section above for more information. Save the batch file as, for example, a file with name "Install_script.bat". Open the batch file to edit. Insert the following commands in the batch file: /transfer "C:\Program Files\Autodesk\AutoCAD 2008\bld\build\install\Win32-x86\bin\AutoCAD2bld\AutoCAD2bld.exe" "C:\Program Files\Autodesk\AutoCAD 2008\bld\build\install\Win32-x86\bin\AutoCAD2bld\settings" The "bld" directory in the path is where your bld is. The "bin" directory in the path is where the AutoCAD2bld.exe is. Save the batch file. Close the AutoCAD editor. If you receive an error, see the "Configuring the Script" section above for more information. Execute the batch file: Insert the following commands in the command prompt window: cd C:\Program Files\Autodesk\AutoCAD 2008\bld\build\install\Win32-x86\bin\AutoCAD2bld\ install bld-config.bin The "bld-config.bin" file is generated by the batch file. The "bld" directory in the path is where your bld is. The "bin" directory in the path is where the AutoCAD2bld.exe is. You now have a bld configuration file. This bld configuration file is for the bld.exe to generate the BINs. You can use this bld configuration file to add other plugins to the bld.exe.

Markup Assist lets you import graphic designs from other CAD applications or printouts. Quick task-building command that lets you build up an operation or component from parts in your drawing. Use standard drawing commands to make changes in your drawing and apply them to your design. Working with Datum, Dimension, and Style: Change the datum and dimension reference in your drawing. Display a datum marker at a specific dimension and place. Add and change dimension symbols. Quickly create and move dimension styles. Project and write data for your model on the drawing canvas. Build project hierarchies and use recursion to create a new "parent" project for each component in a drawing. Create project-based presets for your drawings and assign them to projects. Edit complex and dynamic data in your model with interactive features. Receive data to your project from other applications. Automatically receive data from other applications in your drawing. Design Using Shape, Line, and Text: Add and edit shapes to your drawing. Change the color of a shape, fill it, change its pattern, and change its dash length. Create and edit text. Create text on your drawing canvas and add it to shapes, text styles, or lines. Use text generators to make customized and dynamic text. Add parts to your design from other applications and add them to the current drawing. Rearrange and move parts within your design. Rotate parts. Create and edit entities. Extend your drawing using entities. Track and manage part properties and parameters. Define the same value for multiple parts. Add and edit entities for extruded, revolved, and exploded parts. Edit entities for other applications. Add and remove layers. Add and manage dynamic layers to define visibility. Manage and modify a drawing's current view. Share and receive information with other drawings, other applications, and the web. Plan your design and work from a more organized drawing with the Plan tab. Add and edit components and parts. Create parts from 3D solids and surfaces. Work with 2D and 3D measurements. Change your view and move around the drawing canvas. Resize the drawing area for different paper
