AutoCAD Architecture The AutoCAD application architecture was designed to give CAD users a familiar interface while providing a number of features that allow users to access the functionality of the program without having to be concerned with the intricacies of CAD user interfaces. AutoCAD Architecture (click to enlarge) AutoCAD Architecture The AutoCAD user interface (UI) is designed to be intuitive and easy to use, while still providing access to every capability in the application. AutoCAD users are most familiar with the 'Windows' metaphor for interacting with computers. In contrast, AutoCAD uses a different user interface called Dynamic Architecture (DA), which is not a graphical Windows-like UI. To make DA more intuitive, many tools are accessible through Dynamic Menu, a way to display and use tools without seeing toolbars. AutoCAD Architecture (click to enlarge) AutoCAD Architecture Like the UI, DA is organized in a non-graphical fashion. When using DA, the user can work with a model by viewing it in an intuitive way and then editing it in a way that is as intuitive as possible. This has resulted in a set of

functions called 'intuitive commands'. An intuitive command is a command that's either shown on a tool bar, an onscreen menu, a toolbar, or an onscreen menu, with toolbars that are hidden. This allows the user to work with a model by viewing it in an intuitive way and then editing it in a way that is as intuitive as possible. The primary goal of DA is to create a UI that is easy to use and to understand. By minimizing the number of commands and displaying them as toolbars, dropdown menus, or onscreen menus, the user is more likely to complete their task. The automation of the UI with DA means that the user never has to think about which command to use, when to use it, or how it works. It is up to the user to understand their task. AutoCAD Architecture (click to enlarge) The Animation and Simulation functionality of AutoCAD is accessible to all users, but the user interface is a Dynamic Architecture interface (DA) and not the Windows-like interface that the rest of AutoCAD is based on. As such, there are several steps involved in animating or simulating an object. Dynamic Architecture (DA) is based on a completely different UI.
