ARIS MashZone

ARIS MashZone is based on ARIS Dashboard Server. ARIS MashZone allows creation of MashApps from off-the-shelf sources as well as development of customized MashApps (Dashboards) and MashUIs (the UI that displays the MashApps). There are 2 types of MashApps: Customized MashApps, these are the mashups that are compiled using a framework where you can define reusable MashApps (dashboards). Off-the-shelf MashApps, these MashApps are built using a MashUi (user interface that displays the dashboard) that interacts with their stored MashPoints (ARIS MashPoint Definition Language (AMDL)-based language that represents objects – in this case users) to take action. All MashApps are built using XSL transformation that combines the MashUi with the Dashboard ARIS MashZone Location: The MashApps are stored on the server and any user (with or without ARIS MashPoint access) can view them. MashPoints are stored in a repository and can be exported using an MS Excel spreadsheet format. Dashboards/MashUIs can be exported in Microsoft PowerPoint or Word file formats. Dashboards/MashUIs that are stored in Excel or PowerPoint file formats can be imported back to the server using ARIS MashPoint Viewer. Dashboards are saved in different file formats and can be viewed using any browser. ARIS MashZone Objectivity: ARIS MashZone is not biased to any specific point of view, it can be used to represent all the information that an organization collects and maintains. To assess the impact of residual kidney function on patients' long-term outcomes after cardiac resynchronization therapy (CRT). We retrospectively included 757 heart failure (HF) patients with a left ventricular ejection fraction (LVEF)

What's New in the?

ARIS MashZone for Oracle, Web applications that are based on a graphic user interface (GUI) that enable users to analyse, measure and visualise data from various business applications or data sources. ARIS MashZone web site: Oracle MashApps: The MashApps form the heart of ARIS MashZone. MashApps enable users to create, explore, organise and visualise complex data. The MashApps are made up of icons representing real objects. These are then linked to tables and charts to form a mashup. The icons used in a mashup depend on the role that the user has on a particular project. Mashups can be read, reviewed and edited to any level of complexity. Mashups can then be exported to a variety of formats including Excel, PDF, CSV, and CSV-XLS. This means that you can build mashups from within ARIS MashZone, export to other systems, or make simple mashups into complete packages that can be easily shared. In addition to the ARIS MashZone perspective, the user interface gives you a new perspective on your data. Once created, mashups can be published and, as they can be published to the web, users can collaborate to create mashups on the fly. A mashup can be created on any type of business application and, if it is to be shared, it can be uploaded to a URL, accessed via an application program interface (API) or from the ARIS MashZone web site. Mashups can be indexed so that you can discover related content directly from mashups. Mashup creation: The MashApps form the heart of ARIS MashZone. MashApps enable users to create, explore, organise and visualise complex data. The MashApps are made up of icons representing real objects. These are then linked to tables and charts to form a mashup. The icons used in a mashup depend on the role that the user has on a particular project. Mashups can be read, reviewed and edited to any level of complexity. Mashups can then be exported to a variety of formats including Excel, PDF, CSV, and CSV-XLS. This means that you can build mashups from within ARIS MashZone, export to other systems, or make simple mashups into complete packages that can be easily shared.
