Photoshop and other Adobe programs are a great investment for a graphic designer, but they're also costly. Photoshop CC costs \$699.99 and Photoshop Elements 12 is \$99.00, so you'll want to do some careful shopping to see if you can get a license in a package you want. Figuring out how to use Photoshop If you've used another image-editing program, you'll quickly find that Photoshop is different and a lot of people think it's a pain. But after a while, you become accustomed to the new look and the way that Photoshop works. Photoshop has a different way of making documents, brushes, and other elements. For example, you apply an element by selecting it and dragging it on top of an image, which is different than dragging a photo file into another program. The program also works differently in terms of undoing and redoing. Understanding the layout of an image and Photoshop's workspace is important. The layers and paths are the backbone of Photoshop's editing system, and they play a big role in the way you work. Figure 13-1 gives you an overview of the workspace and some of the tools you use for designing images. Here are some tips to help you navigate the world of Photoshop: Take some time to understand the workspace and the tool bars. When you start Photoshop, the workspace looks similar to Figure 13-1, but over time you will figure out how to rearrange the windows and panels. The tools are the most important things you'll use, so learn them well. When you have a tool selected, you can just keep your finger on the mouse button and let go to rotate, manipulate, or zoom in on an image. You can disable the Move and Zoom tool by pressing and holding down the Command (Mac) or Ctrl key (Windows). You can also zoom in or out using the scroll bar. You can zoom back to 100 percent by pressing Command+0 (Mac) or Ctrl+0 (Windows). You can also zoom in 100 percent by pressing Command+minus sign (-) (Mac) or Ctrl+minus sign (Windows). Plan to use the Command key to zoom, the Ctrl key to move the window or viewport, and the Space bar to lock a tool or size a window or viewport to a specific size or direction. Select multiple objects by holding down the Ctrl key while dragging an object. Click the object you want to

Oklahoma City Thunder forward Serge Ibaka will play in the 2014 NBA All-Star Game, the league announced Tuesday. Sergio Ibaka is a close No. 2 to Houston Rockets center Dwight Howard, who will be voted in by fans at All-Star Weekend in New Orleans. Serge Ibaka will make the West team with LeBron James, Blake Griffin, Stephen Curry, Carmelo Anthony, Chris Paul, Russell Westbrook and Zach Randolph. The East squad will feature Kyrie Irving, Derrick Rose, Kobe Bryant, Kevin Durant, Paul George, Jimmy Butler and Kyrie Irving. Ibaka became an integral part of the Thunder's offense last season. He averaged 14.3 points, 8.5 rebounds and 2.3 blocks last season. In the playoffs, Ibaka averaged 14.0 points and a plus-16.6 rating. Ibaka was an All-Star in 2010 after averaging 15.7 points and 10.8 rebounds. The 6-foot-11 Ibaka also won the Kia Defensive Player of the Year Award last season. Ibaka is the fourth Thunder player to make the All-Star team in the last five years. Kevin Durant, Russell Westbrook and Steven Adams were on the All-Star roster last year. The fan voting closed on Jan. 18 and will be tabulated in conjunction with the coaches' ballots. The NBA All-Star Game will be held at the Smoothie King Center in New Orleans on Feb. 15. Mechanisms of resistance to BRAF inhibitors in melanoma. Advances in molecularly targeted therapy for the treatment of malignant melanoma over the past several years have been spectacular. With the first- and second-generation BRAF inhibitors vemurafenib and dabrafenib, respectively, the dramatic improvements seen in progression-free and overall survival in patients with metastatic melanoma without BRAF V600 mutations were no small surprise. However, virtually all of these patients inevitably developed resistance to BRAF inhibition and died from progressive metastatic disease. For many years, this has been an intense area of research, with an ever-increasing number of putative mechanisms of resistance identified. Over the past 2 years, the BRAF V600E mutation has almost entirely been eliminated from patients with metastatic melanoma, but we have become increasingly aware that the great promise of the initial targeted agents for melanoma is being compromised by the development of resistance. To date, preclinical, clinical, and translational research has led to the identification of a number of potential mechanisms and potential therapy to address these mechanisms. We review these mechanisms of resistance, with an emphasis on BRAF inhibitors, and briefly address other potential therapies directed at other melanoma-associated signaling proteins.Q: google map inside webview not showing routes I have a Cordova/webview hybrid app, having some issues with google maps. I need to have a google map inside my app, and show a route. I was able to have it working fine with some modifications to the google map SDK (android only). Now I'm trying to adapt it to work on IOS, following this example: Everything is working fine except the directions. The route is not loaded. Is there something I'm missing? A: Add the 'places-ios-api-key' parameter in the key declaration, as shown below.Q: Why have all this damage?
