See also: What's New in AutoCAD 2020 This article describes how AutoCAD uses a kind of "opaque" windowing that allows software and hardware to communicate with each other through the shared window system. In practice, this is done by using conventions to identify windows with useful information such as the user's current layer, view, or drawing. This article explains how these windows, called "cad windows", are implemented in the AutoCAD system. Key Topics Customization: how to enable and customize AutoCAD Global Keyboard Shortcuts: how to use AutoCAD keyboard shortcuts Docking and Undocking: how to bring or hide AutoCAD windows Create a User-Friendly Desktop Windows provide an interface for users to interact with applications, but the details of how this is achieved is beyond the scope of this article. It is sufficient to explain how the AutoCAD Application Programming Interface (API) communicates with the Windows windowing system. The AutoCAD API is a set of definitions for user and system programming. The definition consists of C++ classes, named after its components. AutoCAD API Definition Interfaces and Objects Interfaces are declarations of method calls that provide a common means of communication between applications and AutoCAD. For example, the Editor object is a constructor for a graph editor, and the GraphEditor object is an instance of the Editor object. Objects are the elements of the AutoCAD program that are represented by handles. For example, Editor is a handle for an object, and GraphEditor is an instance of the Editor object. System Programming A system call is a request for a service, such as accessing a particular file or searching the Internet. Typically, the API provides the interface for a system call. For example, the Editor object includes a GetData() method that can be used to find out what the cursor is pointing to. The kernel (the core operating system) provides system calls to make computer hardware available to software. User Programming User programming allows AutoCAD to interpret user commands and produce responses. For example

Before AutoCAD Crack 2011, the.NET API was available to AutoCAD, primarily used for dynamic data retrieval and data management. With the release of AutoCAD 2011, the.NET API was replaced with the native programming language Visual Basic for Applications (VBA) and the Dynamic Data Exchange (DDE) API. AutoCAD also supports the use of macros. Macros are used to enable users to automate complex tasks, in AutoCAD and other products. They can be written in AutoLISP, Visual LISP, VBA or AutoCAD native programming. When the macro is run, the drawing window is covered by a user interface (UI) to guide the user in entering inputs to create a drawing. Basic steps AutoCAD has the following basic steps for performing basic tasks: Starting a new drawing Selecting a drawing style Drawing primitives Preparing a drawing for use Editing drawing objects Creating and

manipulating annotation objects
Creating graphics, such as graphs, maps, and charts
Adding external data such as CAD or GIS data and plotting these data
Printing the drawing or plot
There are also special drawing tools and command groups. These include:
Tools These are common tools found in most CAD programs. Examples include: New, Save, Undo, Cut, Copy, and Paste tools
Graphics tools The ability to import images and drawings, as well as creating text and shapes
Tools for editing objects Tools for creating annotations
Drawing guidelines and alignment guides Command Groups These are command groups that perform tasks in a drawing, but allow no user interaction. Examples include: Save a copy of the current drawing, or a specific part of the current drawing.
Languages AutoCAD supports the following programming languages: AutoLISP AutoCAD native programming (APDL) Visual Basic for Applications (VBA) DataLink for AutoCAD (DLA) Autodesk Exchange API History AutoCAD was originally released in 1992 as Autodesk Design Review, with Autodesk Display & Web (ADW) as the first major product release. In 1994, it was renamed Autodesk Drawing. The first release of AutoCAD to use the IEEE 1394 FireWire network standard was in 1994. In 1995, AutoCAD af5dca3d97
