I'm doing this within an async operation which can take some time. So, I need to poll for the message to come in once the thread is done with my async work. I'm using the winsock.h library. For the PostMessage I have a class that implements a WaitableEvent (WaitForMultipleObjectsEx). My question is how do I wait on this event when my thread is done with the async operation? A: I think I made a solution, hopefully can help others. My solution depends on the fact that I was using a while loop (so I didn't have access to msWaitForMultipleObjectsEx) if (MyClass* obj = this->objArray[i]) { WaitableEvent event (WSA_NOTIFY_INPUT, WAIT_OBJECT_0); obj->listener->set_waitable_event (event); obj->listener->operation_complete(); //Sending the message to the thread while (event.WaitForMultipleObjectsEx (1, FALSE, FALSE) == WAIT_OBJECT_0) {} //Receiving the message in the thread while (event.WaitForMultipleObjectsEx (1, TRUE, FALSE) == WAIT_OBJECT_0) {} } I assume that set_waitable_event will be invoked inside the operation_complete function. Cheers. Neil Young is set to headline a 60,000-strong concert to be held in the northern Israeli city of Haifa on June 27. The long-serving Canadian singer, who will be joined by former wife Crosby, will be the first-ever performer at the annual Bet-Dagan Festival, which has been hosted by the city of 80,000 for
