Personal pdf viewer 9.2Q:
Dynamic search bar - C# I
have a list of employees
and I want to search
through a datagridview of
that list. I have a
SearchButton control on
my form and a search
text box. How can I start a
dynamic search through
the datagridview of

employees when the user enters or deletes something in the textbox? I am not sure how to do it and I have googled for hours. Any help is appreciated. A: If I understand your question correctly, you need to subscribe to the KeyUp event of the search control, and make sure to update the DataTable that's bound to the

gridview whenever the search box's text changes. // Copyright (c) Microsoft Corporation.
