I'm trying to figure out how to implement a StreamProvider that takes in a list of objects and in turn streams them. For example, a List customers; should be able to be stored in a List customers; and Stream getAllCustomers. I'm not sure how to do it. I've tried using streaming it but I'm wondering if I'm on the right track? A: Here's an implementation which streams from a list using the IObservable and IObservable interfaces. It's a bit tricky, but I've tested it successfully, public static class Foo { public static IEnumerable GetNumbers() { var numbers = Enumerable.Range(1, 100); return numbers; } public static IEnumerable GetObjects() { var objects = Enumerable.Range(1, 100); return objects; } } class Program { static void Main(string[] args) { var list1 = new List(); list1.AddRange(Foo.GetNumbers()); c6a93da74d
