In fact, if youre using a USB webcam and your computer doesnt have a built-in one, you can use any other USB webcam by simply installing the drivers. The drivers will enable your webcam to work and make it available to use with your computer. The photo below will help show you how to plug and play USB webcams. First, find the USB port on your computer where you want to plug in the webcam. Then, install the drivers. Once installed, double-click your webcamera to access the webcams settings. Next, in the Browse button, locate the location of your downloaded file (the Windows file that you downloaded earlier). Then, click Open. The hardware driver will then install and the webcams settings will be activated. If the webcam still doesnt work, go to the driver update utility to troubleshoot the problem. This is referred to as "installing" the driver. Driver update utility will automatically detect your webcam to install it. But if, for some reason, it does not detect your webcam, simply press the Windows logo key and select Device Manager. Then, locate your webcam in the list of devices shown on the left, and then double-click it. Press Properties, and click the Installed Updates tab. Make sure the Update Driver button is selected, and then click the Next button. Select the Browse button, locate the Windows file that you downloaded earlier (the Windows file that you downloaded earlier), and then click Open. Before purchasing your external webcam, always check the Internet for a list of equipment compatible with it. This is a type of application not available for Logitech webcams, since they are designed to be sold with the camera. However, you can always buy and add additional hardware to a Logitech webcam to improve the performance of the device. 5ec8ef588b
