## Diablo 2 Median XI Maphack 1.12 [BEST]

you should repeat all operations that will be useful to you when playing diablo ii, only that this time you should use plugy to automatically run ce at every start of the game. if you have copied "old" udiemxl.exe into "plugy" folder, it should be enough to just double-click the game icon. if not, you should re-copy the latest version of udiemxl.exe from diablo ii official site into the plugy folder. now we should open our udiemxl.exe, we should enter all tabs, and we should copy "old" loot into inventory and "new" into stash. the first release of mmapxl. initially it was brought to my attention by k-dog. i started working on it to make an area with more weather. eventually it was released as version 1.03. still, with no full installers were available, i spent my time on other mods. then, when i couldn't find a full installer in any of the mods, i switched to xpmmap. at first i couldn't get it to work, but then i realized it didn't support the changes of mmapxl. once i got xpmmap working, it was a matter of just getting everything to work together. shortly after this i added the monster ids in the client to match the server list of all monsters. i also added a server list to the client, and one for the chat box. both of these are easy enough to add/remove from the client. finally, i added quick loadouts, a community built main menu, and clan support. despite how huge this mod is, it's still under development. i still like to expand the options and add more features as time allows. this mod offers the ability to control and hide items which are known to be problematic for diablo 2 players. this applies to the orange and yellow items, and most ring-toss weapons. my first attempt to make this possible was to place all known problematic items in standard (see below) or anything but anything you don't want.

## Diablo 2 Median XI Maphack 1.12

we have full inventory, we can equip any armor or weapon, we have money in bag and we have skill points in sp tab. you can copy, move or delete any number of items to/from bag or your character, just

---

like in beta 1. but we can edit only equipment of your character. to edit skill points, we should switch to "advanced" tab. so now we have full inventory, full money, no sp, but we can't edit anything. so, we will try and remove (with ctrl+shift+del) some items

---

from inventory, like stat points and so on. after removing, we should switch back to "common" tab. now we have more sps and some more loot. perfect! those buttons right at left bottom corner can be really useful, for example, if you want to freeze your health

---

points or your mana points. pressing "menu button", we enter the menu. press "t" to exit the menu and return to the game (but also skip all menus) or press "b" to revert to battle.net menu. in battle.net menu you can access more interface buttons, like "server

---

browser", "check connect",  
"compare characters",  
"create a new battle.net  
account" and so on. when  
opening udiemxl.exe we  
should select a category  
from dropdown menu:  
"top", "bottom", "left" or  
"right". after that we can go  
to any bottommost tab,

---

called what we have in "sidebar". from there we can switch between inventory and stash, and here is where we can add/edit items: you can't add a new item to stash in blizzard mode, but you can add any armor/weapon, i.e. the same items can be

---

stored in stash and in inventory, you can just move them from one to another. you also can't edit in inventory your hero's items, and you have to switch to stash to edit gear.
