Jruler Pro 3.1 47

The most obvious use for JRuler is to measure an exact length on
your screen and can calculate distance, area and perimeter of any
closed shape on screen like rectangle, circle, square, triangle,
polygon, ellipse, rectangle, regular polygons, irregular polygons and
can measure screen and save the screen shot to JPEG, GIF and PNG
image files. It can also calculate the size of an item on a screen and
display an exact percentage of the size of the item. JRuler can be
used to measure screen distances between any two points or points.
This allows easy measurement of screen distances with the accuracy
of a digital ruler and it calculates distances, area and perimeter of
closed shapes with any points and displays to the screen based on
the set scale, you can choose to display using Pixels, Inches, Picas or
Centimeters JRuler allows measurements between any two points,
including any two given nodes or screen coordinates. The units you
choose to display is entirely up to you. The measurement displayed
can be displayed in inches, px or picas. JRuler is a very useful tool to
accurately measure any distance between two points on a computer
screen. You can select the measurement unit you want to use, in
Pixels, inches, picas or centimeters. The accuracy of measurement is
based on the screen resolution and the position of the points to be
measured. JRuler can measure any distance or length between any
two points on a screen and calculate the area and circumference of
any closed shape. You can choose to measure the distance between
any two points on a screen.
