
Spore Galactic Adventures Patch 1.5.1 Crack ((TOP))

if anyone else has had trouble connecting to the spore server when you download the mod i would be happy to know how to fix it, if i can fix it, i will do so. im not sure if you need to reinstall spore, or what, but if you do, i know theres an amazing sporepedia.exe available on the steam site that will automatically update your game, and download any mods that you would need. (use to have to download sporepedia myself to update my game, now i just do it automatically) i wish to know how to install the mod correctly. it seems i have a "program or folder" problem. it seems to be something to do with the install of the mod. i am using origin to install the mod and the updates for the mod. origin installs fine. i get the download and the patches. but when i get to the screen to install it, i get the message that i need to install a program or folder. as the screen is very small, i have no idea what that means. but i have made sure the mod folder is open and nothing is on there. i am playing the mod now, but i wish to be able to use it. all help will be appreciated. thanks. i have just updated to the 1.5.1 version of the spore mod, and it seems to be working ok. i was able to get the new mod and it seems to work ok. however, the old spore mod seems to be left over in my spore menu and it is stuck there. any idea how i can get rid of it so i can play with the new mod? i would like to remove the old mod if possible, so i can play my game with the new mod, but the game seems to have ignored the fact that i have downloaded the new mod. i am using the crack version of the mod from the steam site.
