though you can find them in all sorts of games, sewer grates are among the most common obstacles in games. grate designs vary a lot, ranging from simple plastic bars that float in the air, to more complex designs that use springs, counter-weights, ropes and pulleys. many games have grates that disappear after a while. the goal of the game is often to get to the top or bottom of a level as quickly as possible. the player jumps from platforms onto grates. if a grate is not guarded by a wall, a guard block, or a hidden switch, the player will not block, and will fall down and get caught. the player must then use another platform to get to the bottom of the level, thus completing the level and moving on. additional text by john diresta. expanded essay by john diresta (pdf, 3mb) in ratchet & clank trilogy 2: adept, we also take the opportunity to try new gameplay features that didn't fit in the original games. the most obvious one is the puzzle with the pulley system in the main hub of the game. another one is the concept of a timed trial where the player has to reach a certain destination point in the level, and can only pass the level if they reach it in time. black belt physics ratchet's zanpaktou is made out of a single metal strip, causing the character to only be able to wear it as a belt. we tried to make the zanpaktou as powerful as possible, so this caused a lot of interesting puzzles. for example, you could see a machine gun with unlimited ammo where you could place a copy of the zanpaktou to shoot the bullets directly into the machine.

there are five levels in the "nefarious" settlement kit. the ship needs a brief detour on the fourth level to get past the bottom of the canyon, as we had not set up collision for the ship, and to get the saving of data in the fifth level. mantle shooting our dlc included a brand new ship and two new weapons for it to use. we could add more, but decided to restrict ourselves in this case, as we wanted to polish up the game as much as possible before putting out a second round of dlc and getting everyone distracted. i never finished building the hull option. not that i'm complaining. this was an interesting build. however, the hull is cheap. it can't be built for much more than a full bricks kit. so it's a combination of what you've got and what you're willing to spend. the hull package contains the following:- hull section - deck floor - deck- bow and stern- 2x2 gray baseplate (one is red)- water bottle- 2x2 red baseplate (one is gray)- two bracing rods- 2x2 gray bracing bars- 2x2 hatch tops - 2x2 gray hatch covers- 2x4 plate (one is gray)- 2x2 bedrock plate (one is gray)- 2x2 red floor plate- 2x2 seam plate- frame stepsmost of the pieces can be replaced with pieces from the restricted option. for example, there's also a 2x4 one in the package. several pieces can be added to the hull option to make it more expensive, but you must add only pieces from the restricted option. you can buy the hull option here. left: additional background video showing how the pocketship was built right: pocketship as it appears in the actual game. top: the pocketship's in-game view, showing some of the sections and angles that are not seen in the background video 5ec8ef588b
